Vikar reports H1 2026 growth with 33% increase in clients, expanded fintech partnerships

New partnerships with Fiserv AppMarket, Q2 Innovation Studio, Plaid, and others expand Vikar's capabilities as its national client base grows.

ISELIN, NJ, UNITED STATES, August 17, 2026 /EINPresswire.com/ -- Vikar Technologies, a leading provider of unified account opening, lending, KYC/KYB, treasury, and wealth management solutions for community banks and credit unions, announced 33% client growth in the first half of 2026. This growth reflects increasing demand for Vikar's unified platform among community and regional financial institutions and strengthens its presence nationwide. In a related growth indicator, Vikar added notable partners to the company's roster.

> Growth isn't just measured by the number of clients we add. It's reflected in the partnerships we build, the capabilities we bring to the platform, and the ways our clients expand their use of Vikar."
>
> *Glenn Bolstad, Founder and CEO, Vikar Technologies*

Expansions to the Vikar partner ecosystem signal vendor confidence in the platform and increase the company's capabilities for financial institution clients. Now available in the Fiserv AppMarket and Q2's Innovation Studio, Vikar also announced new relationships with Plaid, FIS ChexSystems®, Onsetto, Persona, and SWIVEL, allowing credit unions and community banks to manage more of the member and customer journey with the Vikar experience.

"Growth isn't just measured by the number of new clients we add," said Glenn Bolstad, founder and CEO of Vikar. "It's also reflected in the partnerships we build, the capabilities we bring to the platform, and the ways our existing clients continue to expand their use of Vikar. Together, those areas of growth allow us to deliver greater value to financial institutions and support more of their business through one unified platform."

Continued expansion with existing clients

Vikar clients are not simply implementing once; they consistently expand the platform into additional products, channels, and workflows. Financial institutions deepened their use of the platform through additional implementation phases, new account-opening channels, platform enhancements, and broader lending capabilities.

These expansions demonstrate how financial institutions can begin with a specific need and continue building on the Vikar platform as their priorities evolve.

Vikar's growing national client base demonstrates the company's commitment to financial institutions.

Advancing Vikar’s AI strategy

Vikar continued to invest in its AI strategy in H1 2026, expanding automation across onboarding, compliance, underwriting, document processing, and portfolio analysis. New capabilities allow the platform to verify and classify documents, extract and prefill application data, automatically spread financials, and generate credit memos and BSA narratives. These competencies reduce manual work for underwriting and compliance teams and shorten the time it takes financial institutions to move an application from submission to decision.

Small & Medium Business platform

Vikar also expanded its small and medium business platform, which lets financial institutions identify and verify businesses and owners, originate and underwrite loans, open multiple accounts, and add treasury management services within a single self- or jointly directed application. The workflow includes contract generation, e-signature, KYB/KYC checks and scoring, financial analyses, and full boarding into the institution’s core system, with optional auto-decisioning for qualifying applications.

Industry recognition and thought leadership

Vikar increased its industry visibility in H1 2026 through media coverage, industry engagement, and product demonstrations. Great Lakes Banker Magazine featured Vikar and Peapack Private Bank & Trust in a cover story on their work together. In addition, Vikar showcased its account opening, treasury management, and small business lending capabilities to financial institution decision-makers through participation in the Datos Insights Corporate Banking Executive Council and tailored demonstrations for Q2 and the ABA/Datos SMB Lending Assessment.

Vikar’s growth is supported by a disciplined implementation model designed to help financial institutions launch solutions in months while continuing to extend the platform over time. The quality and quantity of partnerships, amplification of capabilities, and growing client base underscore that the successes of 2026 will continue in the years ahead.

About Vikar Technologies

Vikar provides an intelligent, unified platform for business and consumer account opening and lending, purpose-built for banks and credit unions. The platform brings together digital account opening, account maintenance, loan origination, onboarding, KYC/KYB, compliance, treasury services, and wealth management into a single, configurable environment, eliminating fragmented systems, reducing manual handoffs, and enabling true straight-through processing. Built to handle complex business relationships, Vikar supports multi-entity structures, international accounts, and treasury services across both self-service and bank-directed channels.
