

InventionHome® Product Developer Creates Boat Secure Hold to Simplify Boat Docking Without Tying Knots

PITTSBURGH, PA, UNITED STATES, August 14, 2026 /EINPresswire.com/ -- Brian J. of Nashville, TN is the creator of the Boat Secure Hold, an innovative docking device that provides a faster, reusable, and more secure alternative to traditional rope-tying methods. This invention was developed to simplify the docking process by eliminating the need for knot tying altogether.

Securing a boat to a dock often depends on properly tying knots that can withstand changing weather and water conditions. However, traditional docking methods can be time-consuming, require experience, and become unreliable if knots loosen or are tied incorrectly. During storms or rough water, a failed knot can allow a boat to shift or break free, potentially resulting in costly damage to both the vessel and the dock. The Boat Secure Hold provides boat owners with an easy-to-use rope securing solution that helps hold a vessel in place while allowing adjustments to be made quickly as docking conditions change.

The device consists of an approximately 8-inch cylindrical tube that opens to receive a docking rope and secures it using internal holding mechanisms. To use the system, the

rope extending from the boat is wrapped around the dock peg twice before both sections of the rope are placed inside the opened device. Once closed, the device grips the rope to help maintain tension without requiring traditional knots. The process can be repeated at each docking point to secure the boat from multiple directions.

Key features and benefits include:

- Eliminates knot tying to simplify the boat docking process.
- Provides a faster and more user-friendly securing method for boat owners of all experience levels.
- Helps improve boat stability by maintaining a secure hold during changing weather and water conditions.
- Offers a reusable and adjustable solution that can be repositioned as needed without retying complex knots.
- Reduces the time and effort required to secure a boat at the dock.
- Simple cylindrical design with internal holding mechanisms provides a practical alternative to conventional rope-tying techniques.

The Boat Secure Hold offers a simple and convenient solution for recreational boaters seeking greater convenience and confidence while docking. The device is designed to make securing a boat faster, easier, and more reliable for helping users spend less time managing dock lines and more time enjoying their time on the water.

Brian filed his Utility Patent with the United States Patent and Trademark Office (USPTO) and is working closely with [InventionHome](#), a leading invention licensing firm, to sell or license the patent rights to his Boat Secure Hold product. Ideal licensing candidates would be U.S. based product manufacturers or distributors looking to further develop and distribute this product innovation.

Companies interested in the Boat Secure Hold can contact InventionHome at member@inventionhome.com. Inventors currently looking for assistance in patenting, marketing, or licensing their invention can request information from InventionHome at info@inventionhome.com or by calling 1-866-844-6512.

About InventionHome®

InventionHome® is a top-rated invention marketing and product licensing company dedicated to helping inventors successfully patent, prototype, and promote their new product ideas. From securing intellectual property to connecting with potential licensees, InventionHome® offers a streamlined path to commercialization. Learn more at <https://www.inventionhome.com> or email info@inventionhome.com.
