Mining Traders Finally Get Their Own Terminal: OreLens Sign-Ups Surge 700% in 10 Days

Junior Mining Media Group's dilution tracker and filing scanner enters beta as traders leave behind the multi-tab workflow the sector has tolerated for decades

PANAMA CITY, PANAMA, August 15, 2026 /EINPresswire.com/ -- A trader following the NASDAQ or NYSE has an entire industry of software built for them. A trader following junior mining stocks has browser tabs. For decades, that has been the accepted reality of the resource sector — until the last 10 days suggested it no longer is.

Junior Mining Media Group, LLC, a Wyoming-registered company with international offices in Panama City, Panama, today announced that its newly launched trading software, OreLens, has recorded a 700% increase in user sign-ups over the past 10 days — growth strong enough that the development team is actively scaling server capacity to keep pace.

Built strictly by traders, for traders, OreLens is an advanced scanner and dilution tracker engineered specifically for the mining stock market. It was designed to close a technological gap the sector has lived with for years: resource investors have never had access to the same caliber of data aggregation and analytical tooling that traders on major exchanges take for granted.

"As someone who historically had to juggle multiple websites and software platforms just to compile daily trading data for the major exchanges, I found a massive void when it came to the mining industry," said Austin Daniels, Founder and lead developer at Junior Mining Media Group. "There was no centralized tool to help traders track critical filings tied to dilution events, identify companies burning through cash that may be approaching capital raises, or quickly surface those reporting strong news and solid balance sheets. OreLens was built to give traders exactly that — all in one place."

One Screen Instead of Ten Tabs

The junior mining sector is one of the most filing-intensive, dilution-driven corners of the public markets — and one of the least served by technology. OreLens consolidates the fragmented research workflow into a single platform. Key features of the beta include:

Advanced Dilution Tracking — real-time monitoring of corporate filings, surfacing dilution-related events the moment they are filed, so traders are reading disclosures instead of discovering them late

Cash Burn Analysis — algorithmic tracking of company expenditures that flags miners depleting cash rapidly and may be approaching a capital raise

Balance Sheet & News Scanning — quick-glance indicators highlighting companies reporting strong balance sheets and recent news catalysts

Every feature reflects the same design principle: the data already exists in public filings — it has simply never been aggregated for how mining traders actually work.

Built From the Trading Desk, Not a Boardroom

OreLens was not conceived by a software company surveying a market opportunity. It was built out of 12 years of daily frustration at an actual trading desk — which is why the feature set maps directly to the questions mining traders ask every morning: Who filed what overnight? Who is running out of cash? Who just reported something the market hasn't noticed yet?

OreLens is currently operating in beta at getorelens.com as the development team continues to scale infrastructure and refine features based on the rapid influx of new users.

About Junior Mining Media Group, LLC

Junior Mining Media Group, LLC is a Wyoming-based company with operational offices in Panama City, Panama. The company is focused on unlocking access and visibility for junior mining companies, helping them gain exposure to a broader, global network of investors through modern media, transparency, and technology. Important Disclosures & Disclaimer

OreLens is currently in beta; features, data coverage, and availability are subject to change, and information displayed by the platform may contain errors, delays, or omissions. All information provided by OreLens and by Junior Mining Media Group, LLC is for educational and informational purposes only and does not constitute investment, legal, accounting, or tax advice, a recommendation with respect to any security, or an offer to sell or the solicitation of an offer to buy any security.

Junior Mining Media Group, LLC is not a registered broker-dealer, investment adviser, or financial advisor, and is not registered with the U.S. Securities and Exchange Commission, FINRA, any Canadian securities regulatory authority, or any other securities regulator in any jurisdiction. OreLens does not make trade recommendations, and no feature of the platform — including scanners, trackers, or indicators — should be interpreted as a signal to buy or sell any security.

Trading in junior mining stocks is highly speculative and carries a significant risk of loss, including illiquidity, dilution, and the possible loss of an investor's entire principal. Users should independently verify all information against official company filings and consult a licensed financial professional before making any investment decision. Full terms, conditions, and disclaimers apply to all users of the platform and are available at getorelens.com.

Forward-Looking Statements
