

Ricky Melwani Expands the TECHMAN Series with The Age of Intelligence and Language

PERTH, AUSTRALIA, August 21, 2026 /EINPresswire.com/ -- Australian author Ricky Melwani has released [TECHMAN Part Two: The Age of Intelligence and Language](#), the second instalment in his continuing science-fiction and techno-thriller series. Published on August 4, 2026, and available through Amazon, the novel brings together advanced computing, neuroscience, robotics and intelligence operations to explore how humanity might respond when an unknown source begins communicating through languages people cannot understand.

Four Story Arcs Build a Connected Technological Mystery

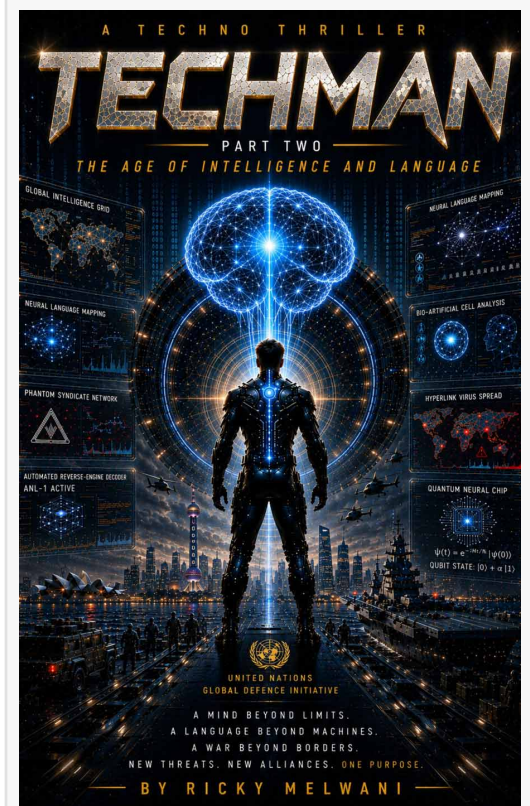

The novel follows four interconnected storylines that gradually reveal the scale of its central conflict.

Aaron Sharma, a young man with an advanced brain chip, leads an investigation into unfamiliar languages appearing across connected technological systems. Each language has a distinct structure, and conventional translation tools cannot interpret them. Aaron must apply the analytical capabilities of his implant while developing technology that can identify the patterns behind the communication.

A second storyline follows Dr. Robert as his medical research moves into human trials. Edilion and Edios, two advanced robotic systems, assist with his investigation of the human brain and body. Their work introduces questions surrounding medical innovation, human enhancement and the consequences of discoveries that remain poorly understood.

The Phantom Syndicate drives another part of the story, drawing Aaron and his team into intelligence gathering and military operations. A fourth threat develops in the background, expanding the narrative and preparing the series for future instalments.

Technology Shapes the Plot and Its Consequences

The Age of Intelligence and Language uses speculative technology as a source of decisions, risks and unanswered questions. Brain chips influence how characters process information. Robotic systems support medical research, while unfamiliar digital languages point towards an unknown source.

'TECHMAN Part Two' combines these ideas with action, mystery and character-focused storytelling. Its central subjects include unknown languages, advanced computing, global infrastructure, cyber threats and scientific responsibility.

"My aim is to combine big technological ideas with action, mystery and character-driven storytelling," said Ricky, Author and Creator of the TECHMAN Series.

The story also continues the world established in TECHMAN Part One, which introduced Aaron's brain-chip technology and the foundations of his journey. The second instalment widens that universe through new scientific developments and threats with international reach.

Written for Readers of Technology-Focused Thrillers

The novel is intended for readers interested in artificial intelligence, neuroscience, robotics, military operations and the future relationship between humans and machines. Its primary question is direct: What happens when unknown languages begin appearing across systems humanity was never designed to understand? Here is a recent article published [about the book](#).

About the TECHMAN Series

The TECHMAN Series is an ongoing science-fiction and techno-thriller universe created by Australian author Ricky. The series explores advanced computing, brain-chip technology, robotics, artificial consciousness, intelligence operations and human enhancement. Each instalment expands a connected narrative focused on the opportunities and consequences created by emerging technology.
