DYNAMICS SQUARE™

PRESS RELEASE

Dynamics Square UK Supports UK Businesses Moving from Legacy ERP to Microsoft Dynamics 365

UK organisations can modernise ageing ERP systems and improve efficiency, visibility and growth with Microsoft Dynamics 365 Business Central, Dynamics 365 Finance and Dynamics 365 Supply Chain Management.

Helping businesses assess, migrate and implement Microsoft Dynamics 365 solutions aligned with their operational goals.

ERP & Process Assessment | Data Migration & Integration | Implementation & Customisation | Reporting & Analytics | Ongoing Support & Optimisation

Talk to **Dynamics Square UK** about your ERP modernisation journey and discover the right path to **Microsoft Dynamics 365**.

...

Many organisations continue to rely on older ERP, finance, and business management systems that were implemented years ago. While these platforms may still support core processes, growing businesses can experience increasing challenges around reporting, automation, integration, scalability, and access to real-time business data.

“

We help UK businesses move from legacy ERP to Microsoft Dynamics 365 with a practical approach focused on efficiency, scalability, and growth.”

Manish Goyal, CEO, Dynamics Square

Dynamics Square UK helps organisations assess their existing systems and determine an appropriate ERP migration and implementation approach based on business size, operational complexity, existing applications, and future growth requirements.

Why Businesses Are Reassessing Legacy ERP Systems

Legacy ERP systems can become increasingly difficult to maintain as businesses expand.

Common challenges include:

- * Heavy reliance on spreadsheets and manual processes
- * Limited real-time reporting
- * Disconnected finance, inventory, sales, and operational data
- * Difficulty integrating with modern applications
- * Complex upgrades and system maintenance
- * Limited automation capabilities
- * Outdated customisations
- * Difficulty supporting multiple locations or business entities

For businesses experiencing these issues, ERP modernisation can provide an opportunity to simplify processes and create a more connected technology environment.

Moving to Microsoft Dynamics 365

Microsoft Dynamics 365 provides a range of ERP and CRM applications designed to support different business requirements.

For small and mid-sized organisations, ****Dynamics 365 Business Central**** can connect finance, purchasing, sales, inventory, projects, warehousing, and other business processes within a single ERP environment.

Organisations with more complex financial, manufacturing, supply chain, or multi-entity requirements can consider ****Dynamics 365 Finance**** and ****Dynamics 365 Supply Chain Management****.

Dynamics 365 can also integrate with Microsoft 365, Power BI, Power Platform, and other Microsoft business applications, helping organisations improve reporting, collaboration, workflow automation, and data visibility.

ERP Migration Is More Than Moving Data

Replacing an ERP platform requires more than transferring information from one system to another.

Businesses need to understand their existing processes, integrations, reporting requirements, customisations, and operational dependencies before implementation begins.

Dynamics Square UK supports organisations across different stages of ERP modernisation, including:

- * ERP and business process assessment
- * Dynamics 365 solution selection
- * Implementation planning
- * Data migration
- * System configuration
- * Customisation
- * Third-party integrations
- * Reporting and analytics
- * User training
- * Testing and deployment
- * Ongoing optimisation and support

The goal is to ensure the new system supports future business requirements rather than simply recreating every process from the previous ERP platform.

> “ERP modernisation gives organisations an opportunity to reassess manual processes, disconnected data, and outdated workflows. A successful Dynamics 365 implementation should focus on measurable business improvements as well as technology.”

Choosing the Right Dynamics 365 ERP

Not every business requires the same Dynamics 365 solution.

Business Central may be suitable for organisations that need connected finance and operational capabilities without the complexity of a larger enterprise ERP platform.

Businesses with advanced financial management, complex supply chains, manufacturing operations, multiple entities, or broader enterprise requirements may be better suited to Dynamics 365 Finance and Supply Chain Management.

Choosing the right solution at the beginning of the project can help reduce unnecessary complexity and create a stronger foundation for future growth.

Supporting Different UK Industries

ERP requirements vary significantly by industry.

Manufacturers may prioritise production planning, costing, inventory control, and supply chain visibility.

Distribution and wholesale companies often need stronger purchasing, warehousing, inventory, and order management capabilities.

Professional services businesses may focus on project management, resource utilisation, financial control, and profitability.

Retail and eCommerce organisations may require integration between ERP, online stores, inventory systems, and fulfilment operations.

Dynamics Square UK works with businesses across different industries to assess how Microsoft Dynamics 365 can support their specific processes.

Talk to Dynamics Square UK About ERP Modernisation

UK businesses considering ERP replacement, legacy system migration, or a new Microsoft Dynamics 365 implementation can contact Dynamics Square UK to discuss their existing environment and future requirements.

The team supports organisations evaluating Dynamics 365 Business Central, Dynamics 365 Finance, Dynamics 365 Supply Chain Management, and related Microsoft business applications.

****[Contact trusted Dynamics 365 partner](#) – Dynamics Square UK to discuss your ERP modernisation requirements and identify an appropriate migration and implementation approach for your organisation.****
