

Worksoft Unveils Automation Insights for Greater Visibility into Enterprise Automation Health

New premium capability helps enterprises identify emerging risks, inefficiencies, and governance gaps across automation programs.

ADDISON, TX, UNITED STATES, August 18, 2026 /EINPresswire.com/ -- [Worksoft](#) today announced

“

As automation becomes more strategic to the enterprise, organizations need to manage the health of their automation program with the same discipline they apply to the business processes it protects”

Aftab Alam, Chief Product Officer

the general availability of Worksoft [Automation Insights](#), a new premium capability for the Worksoft Connective Automation Platform that gives enterprises continuous visibility into the health and performance of their automation programs.

As enterprise automation expands across SAP and other business-critical applications, managing the automation itself becomes increasingly complex. Technical debt accumulates, tests become unstable, execution resources are consumed inefficiently, and maintaining consistent standards becomes harder across teams and projects. Yet most organizations still rely on execution reports and periodic health assessments to understand how their

automation program is performing.

Automation Insights continuously analyzes the Worksoft automation environment to identify emerging risks, inefficiencies, and opportunities for improvement before they affect business-critical testing and releases.

With more than 40 metrics across six categories, Automation Insights provides visibility into program health, performance and efficiency, automation stability, best practices and maintainability, project visibility, and operational analytics. Metrics are refreshed daily, with 30-day trends and drill-down reporting that help teams identify where problems are developing and where to focus improvement efforts.

“As automation becomes more strategic to the enterprise, organizations need to manage the health of their automation program with the same discipline they apply to the business

processes it protects,” said Aftab Alam, Chief Product Officer at Worksoft. “Automation Insights gives teams the continuous intelligence they need to identify risk earlier, improve automation quality and efficiency, and get more value from their investment over time.”

Worksoft Automation Insights is generally available beginning August 18, 2026, as a premium add-on to the Worksoft Connective Automation Platform. It connects to an organization’s existing Worksoft environment without requiring teams to change how they build or execute automation. Customers can contact their Worksoft account team to learn more or request a demonstration.
