

CrafterCMS Achieves TX-RAMP Certification for Secure Cloud Services in Texas

Enterprise headless CMS platform meets Texas security requirements for cloud services used by state agencies and public-sector organizations.

MCLEAN, VA, UNITED STATES, August 17, 2026 /EINPresswire.com/ --

CrafterCMS, the leading open source, [AI-native headless content management system](#) for enterprises,

today announced that it has achieved Texas Risk and Authorization Management Program (TX-RAMP) certification, demonstrating that the CrafterCMS cloud platform, [Crafter Cloud](#), meets rigorous security requirements established for cloud computing services used by Texas state agencies.

Security has always been a foundational requirement for CrafterCMS, particularly for the large organizations that rely on our platform for mission-critical digital experiences”

Mike Vertal, CEO CrafterCMS

TX-RAMP provides a standardized approach for evaluating the security controls of cloud computing services that process data for Texas state agencies. The program helps government organizations adopt cloud technologies while ensuring providers meet established requirements for protecting government systems and information.

With TX-RAMP certification, Texas public-sector organizations can more easily evaluate and deploy CrafterCMS for websites, digital portals, intranets, and

other content-driven digital experiences.

“Security has always been a foundational requirement for CrafterCMS, particularly for the large enterprises and government organizations that rely on our platform for mission-critical digital experiences,” said Mike Vertal, CEO of CrafterCMS. “Achieving TX-RAMP certification gives Texas agencies additional assurance that they can take advantage of a modern, cloud-based, AI-enabled content platform while meeting their security and compliance requirements.”

CrafterCMS provides government organizations with a modern alternative to legacy content

CrafterCMS is the leading open source, AI-native headless content management system for enterprises.

management platforms, combining enterprise content management, headless content delivery, cloud operations, and AI capabilities in a single platform.

CrafterCMS enables large-scale organizations to:

- Build and manage modern public websites, portals, intranets, and digital services
- Empower non-technical teams to create and manage digital experiences
- Deliver content through headless APIs across websites, mobile applications, kiosks, digital signage, and other channels
- Support multi-site and multi-channel content operations from a common platform
- Integrate with enterprise identity, search, analytics, and other government systems
- Maintain complete content version history through CrafterCMS's Git-based content repository
- Build AI-powered and agentic digital experiences using integrated AI capabilities
- Deploy through a fully managed cloud service designed for enterprise security, availability, and scalability

TX-RAMP certification represents another step in CrafterCMS's continued investment in enterprise security, governance, and cloud operations.

CrafterCMS is designed for organizations that require the flexibility of a modern composable architecture without sacrificing the governance, security, reliability, and operational controls expected of an enterprise content platform.

The certification also makes CrafterCMS an increasingly compelling option for Texas agencies modernizing legacy CMS platforms or developing new digital services that require modern content delivery and AI capabilities.

"Government organizations shouldn't have to choose between modern digital experience technology and enterprise-grade security," added Vertal. "Our goal is to give public-sector teams both."

About CrafterCMS

CrafterCMS is an open source, AI-native headless content management platform for enterprises. Its Spring/Java backend, decoupled architecture, Git-based repository, user-friendly content authoring tools, headless APIs, DevContentOps capabilities, and integrated AI technologies enable organizations to build and operate high-performance websites, portals, applications, and AI-powered digital experiences.

CrafterCMS is available as self-hosted enterprise software or as a fully managed cloud service.
