

Helix Wireless Announces Partnership with BeQuick and OXIO to Reimagine Launching an MVNO

NJ, UNITED STATES, August 18, 2026

/EINPresswire.com/ -- [Helix Wireless](#)

today announced a strategic partnership with [OXIO](#) and [BeQuick](#) that delivers to the market something that reimagines what launching an MVNO looks like; network reach, centralized SIM control, and full commercial operations, ready on day one.

Launching and scaling a connectivity business often requires coordinating network services, SIM and mobile plan configuration, customer operations and billing across multiple systems and providers. Helix Wireless, BeQuick, and OXIO are aligning their respective capabilities and implementation workflows to reduce that complexity, improve operational handoffs and help customers bring mobile services to market more efficiently.

“

Individually, each of these companies has innovated and proven to be successful in a difficult market.

Delivering simplicity to our clients and partners remains our #1 goal as we move forward.”

*John Squillace, Helix Wireless
Founder & CEO*

OXIO provides the underlying programmable, global, one-network solution that defies the traditional boundaries of telecom. As an MVNA, Helix Wireless brings their expertise and SOLO platform – a centralized SIM management platform that enables customers to provision, monitor and manage connectivity across their entire deployment from a single interface. BeQuick closes the loop, serving as the commercial system of record where operators manage, bill, collect, and measure every subscriber, purpose-built for MVNOs and configured by the operator rather than the vendor.

The result is a single path from network to SIM to Client. Customers can deploy globally without negotiating coverage, manage every SIM in their fleet from one screen, and bill and activate

subscribers from the moment they go live.

"Individually, each of these companies has innovated and proven to be successful in a difficult market. Delivering simplicity to our clients and partners remains our #1 goal as we move forward. With this partnership, we put total control in our customers' hands," said John Squillace, Helix Wireless, Inc. Founder/CEO, "Our platform, SOLO, is the conduit that helps deliver simplicity extending all the way from a global programmable network to the point of sale."

"Partnerships like this extend the reach of OXIO's Telecom-as-a-Service platform," said Jeremy Bolton, Chief Commercial Officer at OXIO, "We provide the programmable network foundation, including granular plan configuration and network-native capabilities such as Advanced Core Routing. By combining that foundation with the complementary systems and operating expertise Helix Wireless and BeQuick bring, we can support more launches and give more companies the flexibility to bring differentiated mobile services to market."

"Connectivity becomes revenue the moment you can bill for it. BeQuick brings a modern, purpose-built OSS/BSS to a proven SIM layer from Helix and a network from OXIO that is programmable all the way down. For the first time, an MVNO can change a product in all three layers on the same day," said Sean Biganski, BeQuick CEO.

About Helix Wireless:

Helix Wireless is a New Jersey-based telecommunications company that exists to remove the barriers between bold ideas and global connectivity. Whether you're launching an MVNO, enabling your team, connecting millions of devices, or building something new, we provide the foundation that makes it possible.

With connectivity across more than 700 networks in over 190 countries and territories, Helix Wireless helps businesses scale with confidence through one global platform. More than 30 MVNOs are already integrated into the platform, with even more managing their operations directly through SOLO - the platform built to simplify connectivity at scale.

Through innovative IoT, mobility, and MVNE solutions, Helix Wireless unlocks new possibilities for businesses to launch, grow, and operate globally with the reliability, flexibility, and support they need to move forward with confidence.
