

Certified Security Systems Launches Homeowner Security Education Initiative

South Florida security company expands free educational resources to help homeowners make smarter security decisions

ROYAL PALM BEACH, FL, UNITED STATES, August 17, 2026 /EINPresswire.com/ -- Certified Security Systems, a locally owned security company serving South Florida, is expanding its commitment to homeowner education with a growing collection of free security resources designed to help residents make more informed decisions about protecting their homes, families, and property.

CCTV Camera Placement Planner helps South Florida homeowners visualize camera locations and coverage before installing a security camera system.

The initiative is built around a simple idea: homeowners should understand their security options before they buy them.

“

A good security company should do more than sell equipment. We want homeowners to understand their options and make smarter security decisions before they ever call us.”

Evan Crown

Certified Security Systems provides professionally installed security cameras, CCTV systems, alarm systems, smart home security, access control, and related security solutions for residential and commercial properties throughout South Florida. The company is using its experience in the field to create practical educational resources addressing common questions about security technology, camera placement, system design, and protecting properties from everyday security risks.

The company has now helped protect more than 1,000 families, while earning 200 five-star Google reviews from customers.

“We've always believed that a good security company should do more than sell equipment,” said

Evan of Certified Security Systems. "People deserve to understand what they're buying, where cameras should go, what technology actually makes sense for their property, and what they really need. That's why we're putting more of our knowledge into resources homeowners can use before they ever call us."

Helping Homeowners Make Smarter Security Decisions

Security technology has changed dramatically in recent years. Homeowners now have access to high-resolution cameras, smart detection, remote viewing, video doorbells, alarm systems, access control, and other technologies that can make protecting a property more effective.

At the same time, the number of choices can make it difficult for consumers to determine what they actually need.

Certified Security Systems' educational resources are designed to help homeowners understand those choices without relying on a one-size-fits-all approach.

Topics include security camera placement, CCTV systems, wired versus wireless cameras, smart home security, alarm systems, remote viewing, and other practical security considerations.

The company also provides a free [CCTV Planner Tool](#) that allows homeowners and businesses to upload a floor plan or property image and experiment with camera placement to identify potential coverage areas and blind spots. The tool is available through the company's services page.

Education Before Installation

The company emphasizes that [security camera systems](#) should be designed around the property rather than simply choosing a predetermined number of cameras.

Factors such as entrances, driveways, gates, blind spots, lighting, property size, detached structures, and the type of activity being monitored can all influence the appropriate system design.

For homeowners, that may mean cameras covering entry doors, driveways, garages, side yards, pool areas, and other vulnerable locations.

For businesses, security needs may include parking areas, entrances, inventory spaces, loading zones, employee areas, and other critical locations.

Certified Security Systems provides both residential and commercial security solutions and offers professional system design and installation throughout South Florida.

A Local Company Growing Through Customer Trust

The education initiative comes as Certified Security Systems continues to grow its presence throughout Palm Beach County and surrounding South Florida communities.

Reaching more than 1,000 protected families and 200 five-star Google reviews represents more than numbers for the company. Each customer represents a home or business that trusted a local security team with protecting something important.

"We're incredibly grateful for the trust our customers have placed in us," said Evan. "The 1,000-family milestone and 200 five-star reviews tell us that people value having a security company they can actually talk to and get help from. We want our educational resources to provide that same value to people who are still figuring out what they need."

The company plans to continue expanding its educational content and tools as security technology evolves.
