

Titan Minerals hits 33.5m at 6.6g/t gold in new Dynasty discovery in Ecuador

New zone of shear-hosted gold-silver mineralisation discovered at the Cerro Verde prospect, part of the 100%-owned Dynasty Gold Project in southern Ecuador.

QUITO, ECUADOR, August 20, 2026 /EINPresswire.com/ -- 1) Standout intercept of 33.5m @ 6.6 g/t Au and 55.5 g/t Ag from 236.7m in hole CVDD26-199, returned outside the current resource at the Brecha-Comanche target.

2) The mineralisation sits within a northwest-trending structural corridor spanning roughly 1.6 kilometres by 800 metres, which the company believes was missed by earlier drilling due to hole orientation.

3) Follow-up drilling targeting repetitions and lateral extensions is set to begin within a fortnight, with results feeding into a Dynasty resource update expected in early 2027.

“

These latest results add further weight to the theory that the more we drill at Dynasty, the more mineralisation we will continue to discover!”

Melanie Leighton, CEO

Plan View of the Cerro Verde prospect showing drilling, gold gram metre contours, major structures, historic open pits, conceptual pit design (US\$3,500/oz gold), latest significant intercept and targets set to be tested by extensional resource drilling in

[Titan Minerals](#) has identified a new style of gold-silver mineralisation at its Dynasty Gold Project in Ecuador, with diamond drilling returning a high-grade intercept of 33.5m at 6.6 g/t gold and 55.5 g/t silver from 236.7m downhole.

The discovery, at the Brecha-Comanche target within the Cerro Verde prospect, lies outside the existing resource and is associated with a shear zone within a broader northwest-trending structural corridor. Titan says this orientation was likely missed by previous drilling, which ran

sub-parallel to the newly identified structures.

CEO Melanie Leighton said the results provide a breakthrough in understanding mineralisation pathways at Dynasty, adding that further discoveries could materially enhance the resource.

Titan has designed additional drilling to test repetitions and extensions within the corridor, commencing within a fortnight. Results will feed into a Mineral Resource Estimate update targeted for early 2027, as the company continues its 10,000m resource definition program.
