

SendQuick and Feitian Technologies Co., Ltd Partner to Deliver Flexible Enterprise Authentication Solutions

SendQuick and Feitian Technologies Co., Ltd Partner to Deliver Flexible Enterprise Authentication Solutions

SINGAPORE, September 1, 2026 /EINPresswire.com/ -- SendQuick Pte Ltd, a provider of [enterprise authentication](#) and secure communication solutions, today announced a strategic partnership with Feitian Technologies Co., Ltd., a global leader in identity and authentication technologies. The collaboration combines the flexibility of [SendQuick Conexa](#), SendQuick's enterprise authentication platform, with Feitian's comprehensive portfolio of authentication devices to help organisations strengthen access security while providing users with authentication methods that best suit their operational needs.

“

Modern enterprises need authentication choices that work with diverse user profiles, device types and security needs”

JS Wong

Feitian’s authentication portfolio offers a broad range of hardware authenticators such as FIDO security keys with USB, NFC and biometric options and one-time password (OTP) tokens. These devices support strong authentication for identity assurance and access control across enterprise systems. When integrated with SendQuick Conexa, enterprises gain the ability to authenticate users with hardware-backed credentials or one-time passcodes as

part of [secure remote access](#) and identity-driven access management.

“Modern enterprises need authentication choices that work with diverse user profiles, device types and security needs,” said JS Wong, CEO of SendQuick.

“Our partnership with Feitian allows organisations to combine SendQuick Conexa with a variety of physical tokens and authentication devices, from FIDO security keys to OTP tokens. This gives

enterprises the flexibility to meet their security goals, simplify authentication workflows, and deliver a frictionless experience for users while strengthening remote access security."

Feitian's authenticator product line supports both password-less and two-factor authentication models using open standards such as FIDO and OATH. Enterprise IT teams can choose device types that best fit regulatory, usability and deployment requirements, and integrate them with SendQuick Conexa's authentication server. Together, they help organisations reduce administrative cost, support a wider range of user hardware and protect against credential attacks.

Enterprises today face a complex landscape of user profiles, device types and security requirements," said Geoffrey Li, International Technical Director at Feitian. "With SendQuick Conexa authentication platform, organizations are spared the hassle of system setup and can deploy Feitian's FIDO and OTP hardware tokens seamlessly. This gives IT teams the freedom to choose the right authenticator for each use case — whether passwordless FIDO2 security keys or OTP tokens for legacy environments — all within a unified, standards-based architecture."

Key benefits of the SendQuick–Feitian partnership include:

- Flexible Device Support: Compatibility with Feitian's FIDO security keys, NFC and biometric keys and OTP tokens authenticators
- Stronger Access Security: Support for phishing-resistant FIDO2 authentication and multiple secure authentication methods for different enterprise requirements
- Reduced Fragmentation: One authentication server for a wide range of token types, lowering management and support burden
- User Convenience: Choice of device types to match user roles, environments and policies
- Enterprise Integration: Works with hybrid cloud, on-premise and remote access deployments through SendQuick Conexa

The collaboration is now available to global enterprise customers looking to strengthen secure remote access, improve authentication workflows and support diverse hardware token profiles across hybrid workforces.

About SendQuick

SendQuick is a provider of enterprise authentication, alerting, and communication solutions that help organisations strengthen security, improve operational resilience, and automate critical business communications. SendQuick Conexa is the company's enterprise authentication platform supporting a wide range of authentication technologies, including FIDO2, passkeys, OTP, digital identity, push authentication, and passwordless authentication.

About Feitian Technologies Co., Ltd

Founded in 1998, FEITIAN Technologies is committed to developing a comprehensive portfolio of robust authentication, identity verification and secure payment solutions across a full range of security key and smart card form factors; as a member of the Microsoft Intelligent Security Association (MISA), a board member of the FIDO Alliance, and a technology partner of Google,

FEITIAN is a global leader in fingerprint biometric and passwordless authentication solutions, serving enterprise, financial, telecommunications, government and educational institutions in more than 150 countries with industry-leading solutions and services.
