

# Influential Women Spotlights Elena Moseyko: Founder of LedgrAI

DC, UNITED STATES, August 20, 2026  
/EINPresswire.com/ -- Leveraging AI/ML Engineering and Data Science Expertise to Transform Lease Accounting, Automate Compliance, and Streamline Financial Processes

Washington D.C.-Baltimore Area — Elena Moseyko is an AI/ML Engineer, Data Scientist, and entrepreneur dedicated to transforming how businesses approach lease accounting and compliance. As the Founder of LedgrAI, she has developed a pioneering platform designed to transform complex lease portfolios into transparent, audit-ready schedules, helping accounting teams reduce multi-hour manual processes to a matter of minutes.

Moseyko founded LedgrAI with a clear mission: to make accountants' lives easier. Rather than creating another software tool that adds complexity to existing workflows, she designed the platform around accuracy, compliance, transparency, and practical usability. LedgrAI uses artificial intelligence to extract lease terms from PDFs, automate GAAP-compliant schedules, and streamline audit processes, providing accounting professionals with a system they can inspect, rely on, and integrate into their daily work.

With more than a decade of experience in artificial intelligence and machine learning, Moseyko brings a multidisciplinary background to her work. She began her career as an actuary before transitioning into AI/ML engineering roles, including experience at Deloitte and within the public sector. Her professional background spans healthcare and financial services, where she built enterprise systems in highly regulated environments requiring precision, security, accountability, and rigorous attention to detail.

These experiences became foundational to her approach at LedgrAI. Moseyko understands that

AI solutions serving regulated industries must do more than produce results—they must inspire confidence and provide transparency into how those results are generated. Her goal is to combine advanced technology with the level of reliability and accountability expected by accounting professionals.

Moseyko earned a Bachelor of Science in Actuarial Science and a Master's Degree in Data Science from Maryville University of Saint Louis, graduating magna cum laude and with honors, respectively. Her academic training in actuarial science and data science provides her with a strong analytical foundation that she applies to developing practical AI solutions for complex business challenges.

Each chapter of Moseyko's career has represented a deliberate step toward what she believed was possible: using rigorous science and technology to solve compliance problems that can cost businesses enormous amounts of time and create significant risk. As an immigrant and multilingual professional who has navigated technical and professional environments from multiple perspectives, she brings what she describes as an outsider's precision and an insider's determination to every system she builds.

Her entrepreneurial journey has also been shaped by a commitment to continuous learning. Moseyko credits her passion for learning new things and keeping up with emerging technologies as a major contributor to her success. Her natural curiosity and desire to understand what is happening around her have helped her discover new paths, meet new people, and identify industry problems that can be improved through AI. That constant learning and awareness have enabled her to recognize opportunities and make strategic career decisions.

Beyond technology, Moseyko is passionate about mentorship and entrepreneurship. She has leveraged resources from SCORE and the AI startup founder community while building LedgrAI, ultimately securing the company's first clients and creating opportunities for continued development. LedgrAI has also received growing industry recognition, including features in Yahoo Finance and Spotify.

One of the biggest challenges in building the company was securing its first clients. After overcoming that hurdle, LedgrAI is now pursuing additional contracts for its pilot program, creating an opportunity to further develop its AI agentic platform and integrate features based on feedback from its initial pilot customers.

Moseyko sees significant potential among mid-sized CPA firms that continue to manage lease accounting manually or are dissatisfied with existing software but cannot afford enterprise-level solutions. She is particularly excited about developing AI agentic solutions that can be integrated into these firms' processes, helping them improve efficiency while maintaining the accuracy and compliance required in financial reporting.

Her philosophy extends beyond business and technology. The best career advice Moseyko has

received is to always listen carefully before speaking. She believes taking the time to truly listen before responding has been invaluable in identifying opportunities and navigating both her professional and entrepreneurial journey.

For young women entering the technology and AI industries, Moseyko emphasizes the importance of finding a mentor, seeking feedback from managers and peers, and staying informed about rapidly evolving AI developments. She believes timely feedback provides a clearer picture of performance and results, while continuously following AI news can help professionals understand emerging trends and make informed career decisions.

Balance, discipline, and presence are equally important to Moseyko. Skiing and hiking teach her to embrace challenges and remain persistent, while spending time outdoors helps her stay grounded and mentally clear. Most importantly, family remains central to her life. Being fully present with her children and husband, whether visiting parks or attending festivals, allows her to recharge and stay connected to what matters most.

Looking ahead, Moseyko is focused on expanding LedgrAI's capabilities across lease accounting standards and building a company that demonstrates that precision-driven AI and founder-led values can coexist. She is also committed to supporting other women entrepreneurs navigating the intersection of deep technology and highly regulated industries.

Through LedgrAI, Elena Moseyko continues to pursue a vision in which artificial intelligence does not replace professional judgment but strengthens it—giving accounting teams better tools, greater transparency, and more time to focus on the work that matters.
