

Level Home Foundation Repair Sets Out a Long-Term Repair Standard for Tulsa Homeowners

TULSA, OK, UNITED STATES, August 20, 2026 /EINPresswire.com/ -- As Oklahoma's repeated wet-to-dry soil cycle continues to put pressure on residential foundations, Level Home Foundation Repair is outlining the long-term standards it believes homeowners should expect from [Tulsa foundation repair](#): a diagnosis before a recommendation, structural work performed by the accountable crew, and protection that remains useful after the job is complete.

In Tulsa, expansive clay can swell after sustained rain and shrink during heat and drought. That movement can show up as cracks, sticking doors, uneven floors, or gaps around trim, but those visible symptoms do not identify the repair on their own. Level Home's team says a sound repair plan begins by determining whether the movement is active, where the load needs support, and whether water management or underfloor conditions are contributing to the problem.

"Homeowners deserve a clear explanation of what their house is doing and why a particular scope is being recommended," said Jerod Sellers, Operations Manager and Structural Analyst at Level Home Foundation Repair. "A low number on an estimate does not tell someone whether the proposed work addresses the cause, the affected load path, or the long-term condition of the property. Our team's job is to make those distinctions understandable before work starts."

The company's standard centers on three practical questions homeowners can use when evaluating a repair plan:

Who is accountable for the work? Level Home uses 100% in-house crews rather than subcontractors, so the people performing the structural work are part of the same team that assessed the property and developed the plan.

What support is being installed, and why? For settlement requiring deep stabilization, the team evaluates options such as [steel pier foundation repair](#) based on the structure, site access, and soil conditions. It does not treat a visible crack as a stand-alone diagnosis.

What happens after installation? Major repairs include a transferable warranty at no cost to the next owner. During the first two years after repair, customers also receive a free annual Home Health Check, giving them an opportunity to review the property's condition with the team that completed the work.

Level Home has stabilized more than 3,000 properties and has more than 10 years of field

experience in Oklahoma. Its seven proprietary licensed products reflect hands-on work in the region's challenging soil conditions, while its approach remains inspection-first: recommend only the work the property needs.

Tyler McKenzie, Project Manager and Structural Analyst, noted that a useful plan should also make the process visible. "A homeowner should know the sequence—from assessment and preparation through installation and final review—not just the name of a product. Our [foundation repair process](#) is built around that clarity."

Homeowners who notice changes in floors, walls, doors, or exterior brickwork can schedule a free inspection with Level Home Foundation Repair at (918) 361-7787.
