

Fasoo AI Brings Fine-Grained Data Security to External Collaboration in Financial Services

SEOUL, SOUTH KOREA, September 1, 2026 /EINPresswire.com/ -- Fasoo AI, a leader in data-centric security and AI-ready data management, addresses a critical security gap in financial services by enabling organizations to maintain control over sensitive documents even after they are shared with customers, auditors, regulators, and third-party partners.

The logo for Fasoo AI, featuring the word "FASOO" in a large, bold, blue sans-serif font, followed by a vertical bar and the letters "AI" in a smaller, bold, blue sans-serif font.

“Secure collaboration requires more than protecting where a file is stored or how it is moved,” said [Jason Sohn, Executive Managing Director at Fasoo AI](#). “Financial institutions need persistent control over sensitive documents, including clipboard restriction, screen capture prevention, and watermarking, that extends to copies and reformatted derivative files.”

Financial services organizations routinely exchange customer records, contracts, financial reports, audit evidence, and other sensitive information with external parties. While email attachments, shared drives, and general-purpose file-sharing platforms make that exchange convenient, they can create a critical security gap once documents are downloaded or distributed beyond the organization.

Maintaining control after documents leave the organization has become a growing security challenge for financial institutions. Organizations need to know who accessed a document, whether it was downloaded or modified, which version is current, and whether access can be immediately revoked when a project, audit, transaction, or third-party relationship ends.

Fasoo AI's Wrapsody eCo applies persistent, file-level security to external collaboration, allowing financial institutions to maintain control over sensitive documents throughout their lifecycle. Organizations can assign granular permissions to individual collaborators, control actions such as viewing, editing, downloading, and printing, and modify or revoke external access when business requirements change.

Wrapsody eCo also maintains detailed collaboration histories and document activity logs, giving security and compliance teams greater visibility into how information is being used. Centralized version management helps ensure collaborators work with the latest documents rather than

creating uncontrolled copies across email threads and disconnected repositories.

For financial institutions, these capabilities support sensitive workflows such as regulatory reviews, external audits, customer document exchanges, financial transactions, and collaboration with professional service firms. Persistent controls help organizations extend governance beyond the traditional enterprise perimeter while supporting regulatory and internal compliance initiatives.

As financial ecosystems become increasingly interconnected, Fasoo AI sees secure external collaboration as a significant extension of its data-centric security strategy. The company expects growing demand for security architectures that maintain persistent control over sensitive data across organizational boundaries.
