

Rewardopedia Launches Independent Credit Card and Travel Rewards Comparison Platform With a Data-Freshness Dashboard

Automated rankings under a published, version-controlled methodology; 182 card records across 10 issuers at launch, with a public timestamp on every record

MIAMI, FL, UNITED STATES, August 23, 2026 /EINPresswire.com/ --

Rewardopedia, an independent comparison platform for credit cards and travel rewards, today launched at rewardopedia.com. The site publishes side-by-side card comparisons drawn from issuer terms, a public data-freshness dashboard, and five calculators that report points, miles, and dollars instead of subjective point valuations.

Rewardopedia primary lockup

"Readers should be able to check the work," said Mary Massoumi, founder and CEO of M Powered Ventures, which operates Rewardopedia. "That means issuer math you can open, a public freshness date on every record, and a methodology that goes out before the first hotel-night figure."

Readers should be able to check the work. That means issuer math you can open, and a methodology that goes out before the first hotel-night figure."

Mary Massoumi, Founder & CEO, M Powered Ventures

Built around direct comparison

The platform is built around direct comparison. Readers can place two options side by side, including live matchups across six hotel loyalty programs, such as Hyatt versus Hilton. Figures come from a fully automated pipeline that

Rewardopedia operates independent of issuers and affiliate networks.

Five calculators on rewardopedia.com/tools translate rewards terms into concrete outcomes based on how a reader actually spends and travels. Find your break-even spend compares an

annual fee with the category mix a reader enters. Compare current welcome offers lines up current published welcome offers from the catalog. What your card actually earns reports native points, miles, or cash back with a conservative 1 cent per point floor. Trip cost combines a measured hotel basket with the daily spend a reader enters. Cash out, portal, or transfer compares those redemption paths from published point values. Each calculator shows its inputs and assumptions on the page, so results can be traced back to issuer terms rather than to an editor's point valuation.

How rankings are produced

Rankings are generated by the Rewardopedia Engine under a published, version-controlled methodology, available at rewardopedia.com/about. Results cannot be manually overridden, and commissions do not influence inclusion or verdicts. No issuer or sponsor signs off on what the platform publishes.

"Advertised point values are a marketing number," Massoumi said. "What a reader actually redeems is usually a different one, and that gap is why the issuer math has to sit in public."

Launch catalog and data freshness

As of Aug. 21, 2026, the catalog held 182 card records across 10 issuers, including Chase, American Express, Citi, Capital One, and Barclays. Of those, 148 records last changed in the prior 30 days.

A public dashboard at rewardopedia.com/data-freshness shows when each issuer's records last changed. The dashboard is updated automatically as the pipeline runs, giving readers a verifiable answer to the question most comparison sites leave open: how old is this information?

A methodology-first hotel-night cost index

Rewardopedia has also published the methodology for a planned hotel-night cost index: one dated figure per destination per month, hotels only, within a fixed, defined central area of each city. The first public run is still in calibration, and no destination figures are live. The company chose to publish the method before the first number rather than quote hotel prices that change before a page is finished.

Availability

Rewardopedia is free to read at rewardopedia.com, with no account required. The site is funded by disclosed affiliate links; affiliate relationships are listed at rewardopedia.com/disclaimer.

About Rewardopedia

Rewardopedia is an independent comparison platform for credit card and travel rewards. The platform turns dense issuer terms and shifting point valuations into clear, side-by-side answers so readers can see what a card or program is really worth for the way they spend and travel. Rewards data is sourced directly and kept current, and recommendations are organized around real value rather than sign-up hype. Learn more at <https://www.rewardopedia.com>.

About M Powered Ventures

M Powered Ventures is a women-owned firm that builds and operates technology products for startups. It operates Rewardopedia and is based in Miami.
