

# Time Made Visible: MONDAINE Unveils the Doppio Solar Skeleton

*A new 41 mm expression of the Doppio collection brings solar technology into view, combining Swiss design with a more responsible approach to timekeeping.*

PFÄFFIKON SZ, SWITZERLAND, August 27, 2026 /EINPresswire.com/ -- The technology that powers a watch usually remains hidden. With the new [Doppio](#) Solar Skeleton, [MONDAINE](#) makes it a central part of the visual experience, revealing the solar plate through a precisely cut circular opening in the dial.

The design builds on Doppio's distinctive language of depth, repetition and structural clarity. Double-line hands and indexes, a concave dial and double-domed sapphire crystal create subtle layers while maintaining the clarity and balance that define the collection.

A Swiss solar movement captures natural and artificial light and stores the converted energy in a rechargeable battery, eliminating the need for regular battery replacements. Once fully charged, it provides a power reserve of up to eight months in darkness, while just a few minutes of sunlight can reactivate a fully discharged movement.

"The Doppio Solar Skeleton turns the technology behind timekeeping into something to be seen. By revealing the solar plate, light becomes both the source of its energy and a defining part of the design." — Maria Valenzuela, Global Marketing Group Director

The Doppio Solar Skeleton comes in two distinct interpretations. A polished silver 316L stainless steel case with a black vegan grape leather strap offers a refined, understated look, while a

polished black stainless steel case with a matching Milanese mesh bracelet creates a more contemporary, architectural expression. The two versions offer different ways to wear Doppio, suited to a wide range of personal styles and preferences.

With the Doppio Solar Skeleton, MONDAINE brings together Swiss Made craftsmanship, distinctive design and energy-efficient technology in a watch made for everyday wear.
