

TravelDistro Opens QR-Issued Attraction Tickets for Türkiye's Landmarks via a Single API

Agencies can now sell QR-issued tickets to Türkiye's top attractions, plus tours and transfers, through TravelDistro's single unified travel API.

ISTANBUL, TURKEY, August 24, 2026 /EINPresswire.com/ -- TravelDistro today made [QR-issued attraction tickets](#) for Türkiye's landmarks available to travel agencies worldwide through a single API, alongside curated tours and airport transfers.

TravelDistro is a B2B travel API marketplace that unifies six verticals under one contract. Through the tickets endpoint, agencies can issue QR-based entry tickets to major cultural and historic sites, while the tours and transfers endpoints add curated experiences and point-to-point ground transport across [nine destinations in Türkiye](#).

“

We turned attraction access into a clean API call any agency can integrate in an afternoon.”

Alper Tekin, Founder of Travel Distro

The company operates a network of destination content sites covering landmarks such as Hagia Sophia, Galata Tower, Rumeli Fortress and Dolmabahçe Palace, connecting international travelers to reliable destination information and to bookable inventory through the same distribution infrastructure.

"Türkiye's cultural heritage is one of the world's richest, but distributing tickets to it has been painfully manual," said Alper Tekin, founder of TravelDistro. "We turned attraction access into a clean API call any agency can integrate in an afternoon."

Each booking is confirmed through the same signed, idempotent request model used across the platform, with pricing available in Turkish Lira, US Dollar, Euro and British Pound. Support and API content are offered in English, Turkish, Persian and Spanish, matching Türkiye's largest

inbound source markets.

TravelDistro's approach draws on the group's peer-reviewed research into inbound travel, [faith tourism in Anatolia](#) and Türkiye's position as a destination in global B2B distribution.

Agencies can request sandbox keys to test ticketing, tour and transfer flows against simulated inventory before selling to travelers.
