CGS Infotech Solutions Joins Technology for Nation Building Session With Swami Vigyananand

Mumbai program explored AI, entrepreneurship, Sanatan values and innovation as capabilities for nation building and national service.

MUMBAI, MAHARASHTRA, INDIA, August 24, 2026 /EINPresswire.com/ -- CGS Infotech Solutions participated in "Technology for Nation Building and Rashtra Seva," a special guidance and interaction program organized by Global Kapol Vikas Foundation in Mumbai on August 6, 2026.

Global Kapol Vikas Foundation presents a special interaction on technology, Artificial Intelligence, entrepreneurship and Rashtra Seva with Pujya Swami Vigyananand Ji Maharaj.

Held at 201, Gundecha Industrial Estate, Akurli Road, Kandivali East, the program focused on how technology, Artificial Intelligence (AI), entrepreneurship and innovation can contribute to nation building and national service while remaining connected with responsibility, values and wider social purpose.

The featured guidance was delivered by Pujya Swami Vigyananand Ji Maharaj, Joint General Secretary of the Vishva Hindu Parishad. The program brought his perspectives on technology and economic progress into an interactive setting with business leaders, entrepreneurs, professionals and community participants.

The program combined a special guidance session with participant interaction and discussion around four principal themes: Technology for Nation Building and Rashtra Seva, Artificial Intelligence for national service, entrepreneurship aligned with Sanatan values, and collective prosperity through innovation.

Rather than treating technology as a standalone technical subject, the discussion connected emerging capabilities with questions of entrepreneurship, responsibility, economic participation, human development and service. AI was considered in the context of how people, businesses and institutions can understand new tools while remaining conscious of their purpose and practical consequences.

Program materials introduced Swami Vigyananand Ji Maharaj as an IIT Kharagpur alumnus and a scholar of Sanskrit and Vedanta, alongside his work in Hindu social and economic forums. His participation brought together perspectives from technology, philosophy, entrepreneurship and national service within the same conversation.

A special interaction following the Technology for Nation Building and Rashtra Seva program in Mumbai, highlighting engagement and meaningful exchange between participants.

The participant audience included Kapol business leaders, entrepreneurs, professionals and families associated with the Pushtimargiya Vallabh Parampara. Their participation gave the interaction a cross-section of business, professional, community and values-oriented perspectives.

> Technology creates its greatest value when innovation becomes responsible capability that helps people learn, build and contribute.”
>
> *Hiten Bhuta*

Mukesh Mehta, Project Director of Global Kapol Vikas Foundation, represented the organizing team for the special meeting and interaction. The program was scheduled from 2:30 p.m. onwards on Thursday, August 6, with attendees gathering at the Kandivali East venue for the guidance and discussion.

Hiten Bhuta, Founder associated with CGS Infotech Solutions and OpenClearFuture, participated in the session and contributed a technology and future-readiness perspective to the interaction.

“Technology creates its greatest value when innovation becomes responsible capability that

helps people learn, build and contribute," Hiten Bhuta said.

The discussion reflected a broader question facing entrepreneurs and institutions as AI becomes more accessible: technological capability by itself does not determine how effectively or responsibly technology will be used. Knowledge, judgment, application skills and a clear understanding of purpose remain important parts of technology adoption.

For entrepreneurs, the program connected innovation with the ability to create sustainable economic activity and contribute to collective progress. For professionals and business leaders, it provided an opportunity to consider how emerging technology can be incorporated into organizations without separating technical advancement from human responsibility.

The session also highlighted the relationship between knowledge and service. Technology can expand access to information, improve processes and create new entrepreneurial possibilities, but its wider contribution depends on how that capability is applied.

The August 6 program is being documented as part of an ongoing conversation around practical AI adoption, entrepreneurship, innovation and future readiness. As businesses, educational institutions and professional communities examine the implications of AI, discussions that connect technology with responsible application can help broaden the conversation beyond tools and platforms.

Through CGS Infotech Solutions and OpenClearFuture, Hiten Bhuta is associated with digital technology services, AI consulting and training, strategic foresight and future-readiness initiatives. These activities focus on helping businesses, institutions and professional communities understand technological change and consider practical approaches to adoption.

The Technology for Nation Building and Rashtra Seva interaction demonstrated how a community program can bring technology, entrepreneurship, values and service into one discussion. Its central idea was that innovation becomes more meaningful when technical capability is connected with learning, responsibility and constructive contribution.

Media organizations seeking interviews on AI, technology, entrepreneurship and future readiness, and institutions or event organizers planning related discussions, training programs, panels or leadership sessions, may contact Shreya Chavan at CGS Infotech Solutions.

For media inquiries, technology discussions, AI education programs, future-readiness workshops, speaking engagements, and collaboration opportunities related to responsible innovation and digital transformation, please contact Shreya Chavan, CGS Infotech Solutions, at shreya@cyberwebhotels.com or via WhatsApp/Phone at +91 89567 60812.

Organizations considering AI consulting, AI training, strategic-foresight programs, digital transformation discussions or technology-focused educational initiatives may also contact the team for an initial discussion about their objectives and requirements.

About CGS Infotech Solutions
CGS Infotech Solutions is a Mumbai-based technology and digital-services organization. Its public service portfolio includes website design and development, search-engine optimization, social-media management, email marketing and automation, hosting and email solutions, Google Workspace support and emerging digital tools.

About OpenClearFuture
OpenClearFuture is Hiten Bhuta's AI consulting, AI training, strategic-foresight and future-readiness initiative. Its work focuses on responsible AI adoption, workforce capability, leadership preparation and understanding technological change.
