

# Dr. Shaun Larsen Launches LowVisionAids.org to Help People Stay Independent

*New platform combines eye disease education, advanced low vision aids like the Zoomax Snow 12, and the personalized Macular Revive wellness program.*

RIVERTON, UT, UNITED STATES, August 24, 2026 /EINPresswire.com/ -- LowVisionAids.org Combines Extensive Eye Disease Education, Advanced Low Vision Devices, and the Macula Revive Program

For millions of people living with vision loss, one of the greatest challenges is maintaining independence. Everyday activities such as reading, recognizing faces, managing medications, preparing meals, working, and enjoying hobbies can become increasingly difficult as vision declines.

LowVisionAids.org, founded by optometrist Dr. Shaun Larsen, was created to help people with vision loss find information, technology, and resources that can help them remain active and independent.

The website combines an extensive educational library with an online store featuring advanced low vision devices and information about the site's Macula Revive program.

## Education First

One of the primary goals of LowVisionAids.org is education. The website contains several

The infographic features a central illustration of a hand holding a magnifying glass. Surrounding this central image are five circular icons, each representing a benefit of the bioptic telescopic system. The benefits are listed in a circular arrangement around the central image:

- Recognize faces**: Help individuals recognize faces from across a room.
- View presentations**: View classroom presentations.
- Maintain independence**: Maintain independence in work, education, and recreation.
- Attend events**: Attend sporting events and watch performances.
- Read sign**: Read signs at distances.

At the top of the infographic, there is a quote from Dr. Shaun Larsen: "Our goal has always been to empower people through education. When someone is diagnosed with an eye disease, they're often overwhelmed and don't know where to turn. We wanted to create a resource that explains the condition in understandable language while also giving people practical tools they can use to continue living independently." Below the quote is a small portrait of Dr. Shaun Larsen.

At the bottom of the infographic, the text "LOW VISION SPECIALISTS" is displayed in a large, bold, sans-serif font, with a stylized eye logo above it.

hundred articles covering eye diseases, causes of vision loss, treatment options, current research, nutrition, and strategies for living with low vision.

Visitors can find information about conditions including age-related [macular degeneration](#), glaucoma, diabetic retinopathy, retinitis pigmentosa, Stargardt disease, and other causes of visual impairment. The site also provides resources for caregivers and people who are trying to understand what options may be available after receiving a diagnosis of significant vision loss.

“Our goal has always been to empower people through education,” says Dr. Larsen. “When someone is diagnosed with an eye disease, they’re often overwhelmed and don’t know where to turn. We wanted to create a resource that explains these conditions in understandable language while also giving people practical tools they can use to continue living independently.”

### Advanced Low Vision Technology

LowVisionAids.org also operates an online store featuring a wide variety of low vision aids, ranging from handheld magnifiers to sophisticated desktop electronic magnification systems. The website emphasizes devices that can help people perform everyday tasks more effectively and maintain their independence.

Among the most popular products are electronic magnifiers from Zoomax, including portable and desktop devices.

One of the site’s most popular devices is the [Zoomax Snow 12](#), a portable electronic magnifier with a large display and reading stand. Devices like these can help individuals read books, newspapers, mail, recipes, medication labels, photographs, and other printed materials that have become difficult to see.

For people who need a larger viewing area, desktop electronic magnifiers provide additional magnification and can be useful for reading, writing, crafts, hobbies, managing finances, and other detailed activities.

### Bioptics Can Help Preserve Independence

Another specialized solution available through LowVisionAids.org is the bioptic telescope. A bioptic is a small telescopic optical system that can be mounted onto a person’s regular eyeglasses. The telescope can be quickly flipped into position when additional magnification is needed and then flipped back out of the way when it isn’t.

This allows a person to use their normal vision for most activities while having additional magnification available when needed.

Bioptics may help individuals see distant signs, recognize faces, view presentations, watch sporting events or performances, and perform other activities requiring greater visual detail. For appropriately evaluated individuals, bioptic systems can be an important tool for maintaining greater independence and participation in everyday life.

### Macula Revive: A Personalized Approach to Macular Health

In addition to low vision technology and education, LowVisionAids.org offers Macula Revive, an

educational and wellness program developed following an extensive review of scientific literature related to age-related macular degeneration and factors associated with retinal health.

Dr. Larsen spent approximately a year reviewing published research examining areas including genetics, nutrition, inflammation, oxidative stress, vascular health, metabolism, and other biological factors discussed in connection with macular health.

Rather than using the same approach for everyone, Macula Revive uses several forms of testing to provide participants with individualized information.

The program includes food sensitivity testing intended to identify foods that may contribute to inflammatory responses in susceptible individuals. It also incorporates genetic testing designed to identify inherited variations that may influence nutritional metabolism and other biological pathways relevant to overall health.

Participants can also undergo biomarker testing to evaluate current indicators associated with areas such as inflammation, hormonal balance, and other physiological systems. These results can provide information about an individual's current biological status and help inform individualized educational and wellness recommendations.

Another component of the program involves a microcurrent stimulation device configured with protocols developed to focus on retinal tissues and body systems discussed in the scientific literature, including circulation, blood pressure regulation, and inflammatory pathways.

Dr. Larsen believes that understanding the individual may be just as important as understanding the disease.

"Every individual is different," says Dr. Larsen. "The published research suggests that multiple biological and lifestyle factors may be associated with retinal health. Our goal is to help participants better understand their own health information and develop individualized educational and wellness recommendations informed by the available scientific literature."

Macula Revive was developed as an educational and wellness program that applies findings from published scientific research to create an individualized evaluation process. It is not intended to diagnose, treat, cure, or prevent disease, and participants are encouraged to continue receiving regular care from their optometrist, ophthalmologist, and other healthcare providers.

### Helping People Live Better With Vision Loss

The mission of LowVisionAids.org extends beyond providing products. It is focused on helping people understand their vision conditions, discover available resources, and find tools that may allow them to remain active and independent.

Whether someone has recently been diagnosed with macular degeneration, has lived with glaucoma for years, or simply needs technology to make reading and daily activities easier, LowVisionAids.org provides educational information and practical low vision solutions.

By combining extensive eye disease education, advanced assistive technology, and individualized

wellness resources, Dr. Larsen and LowVisionAids.org are working to give people with vision loss more options and greater confidence in managing their daily lives.
