

iFLYTEK AI Translator 4.0 Now on Sale in Australia, Bringing Real-Time Language Translation to Travel and Business

The portable AI translator combines voice and photo translation, face-to-face conversation and intelligent noise cancellation for multilingual communication.

AUSTRALIA, August 25, 2026 /EINPresswire.com/ -- [iFLYTEK](#) has announced that the [iFLYTEK AI Translator 4.0](#) is now on sale in Australia, offering travellers, business professionals, students and international users a dedicated AI-powered translation device designed to make multilingual communication easier.

Built for communication on the move, iFLYTEK AI Translator 4.0 supports travellers and professionals across multilingual environments.

Combining real-time voice translation, two-way translation, photo translation, OCR technology and face-to-face bilingual conversation, the AI Translator 4.0 is designed to support communication across a wide range of travel, business and everyday situations.

“

Language barriers shouldn't limit where people travel or do business. AI Translator 4.0 is designed to make communication across languages simpler and more natural.”

said Wenchuan Liu, General Manager, Global Consumer Group, iFLYTEK.

Unlike a traditional translation app, the dedicated handheld translator combines a high-definition display, camera, microphones and AI translation technology in one portable device, providing users with a purpose-built solution for language translation and real-time communication.

Real-Time AI Translation for Everyday Conversations

Language barriers can arise anywhere, from airports and hotels to restaurants, business meetings and international events.

The iFLYTEK AI Translator 4.0 is designed to provide real-time voice translation for face-to-face conversations, allowing users to speak naturally while the device recognises and translates spoken language.

Online voice translation supports up to 60 languages and regional accents, helping users communicate with people from different linguistic backgrounds.

With its two-way translation capabilities, the device can be used as a smart translator and portable language translator for conversations where two people speak different languages.

Face-to-Face Translation

The AI Translator 4.0 features a dedicated face-to-face translation mode, providing a bilingual interface designed for two-way conversations.

Users can communicate directly while each person views translated information in their respective language, creating a more intuitive experience than passing a smartphone between speakers.

The feature can be used for travel conversations, international business communication, customer interactions and everyday multilingual situations.

Translate Photos, Signs and Documents with AI

The AI Translator 4.0 also works as an AI camera translator and OCR translation device, allowing

iFLYTEK AI Translator 4.0 is designed for everyday multilingual communication across travel, work and business settings.

iFLYTEK AI Translator 4.0 helps travellers communicate across language barriers while navigating unfamiliar destinations.

users to translate written information using its built-in camera.

Users can photograph menus, signs, labels, documents and other printed materials, with AI-powered OCR technology recognising the text and providing a translated result.

Photo translation supports up to 50 languages, providing another way for users to understand written information while travelling or working internationally.

From reading a restaurant menu to understanding a street sign or checking information on a document, the device is designed to make photo translation and document translation more accessible.

Designed for Clearer Communication

The AI Translator 4.0 incorporates a U-shaped quad-microphone array and AI noise cancellation to help capture speech in different environments.

This is particularly useful in busy locations such as airports, restaurants, conferences, trade shows and city streets, where background noise can make voice recognition more challenging.

The device also supports Wi-Fi, global 4G LTE and Bluetooth 5.0, providing connectivity options for users travelling internationally.

A Portable AI Translator for Travel

At approximately 130 grams, the AI Translator 4.0 is designed to be carried easily while travelling. Its 5.05-inch HD display provides a dedicated screen for viewing translated conversations and content.

For international travellers, the device can serve as a travel translator, handheld translator, language translator and real-time translation device, helping users navigate everyday situations without relying solely on their smartphone.

Whether communicating with hotel staff, ordering food, asking for directions or interacting with people overseas, the AI Translator 4.0 is designed to provide a more dedicated translation experience.

Supporting International Business Communication

The need for effective language translation extends beyond tourism.

For businesses operating across international markets, communication can be an important part of meetings, customer service, hospitality, trade shows and cross-border operations.

The iFLYTEK AI Translator 4.0 provides a dedicated business translation device that can support multilingual conversations and help users communicate with international customers, partners and colleagues.

Its translation records can also be exported to a computer, allowing users to retain conversation information for later reference.

Bringing AI Translation Beyond the Smartphone

The iFLYTEK AI Translator 4.0 brings together AI speech recognition, machine translation, OCR, camera translation, voice translation and intelligent noise cancellation in a single purpose-built device.

By combining these technologies with dedicated hardware, iFLYTEK aims to provide users with a practical solution for communicating across languages in situations where speed, portability and ease of use matter.

The result is a compact AI translation device designed for travel, business, education and everyday communication.

Now on Sale in Australia

The iFLYTEK AI Translator 4.0 is now on sale in Australia through the iFLYTEK Australia online store.

Product: iFLYTEK AI Translator 4.0
