

Lumière Skin Düsseldorf Opens for Laser Hair Removal With Alexandrite & Nd:YAG

New Düsseldorf center offers permanent laser hair removal with Alexandrite 755 nm and Nd:YAG 1064 nm technology for women and men.

DÜSSELDORF, NRW, GERMANY, August 24, 2026 /EINPresswire.com/ -- [Lumière Skin Düsseldorf](#) will open in September, offering professional laser hair removal for women and men using Alexandrite 755 nm and Nd:YAG 1064 nm laser technologies.

Located in Düsseldorf, one of Germany's most international and multicultural cities, the new center is designed to serve clients from diverse backgrounds with an individualized approach to laser hair removal.

Rather than relying on a single wavelength for every client, Lumière Skin Düsseldorf works with two established laser wavelengths. Treatment parameters can therefore be selected according to individual skin and hair characteristics following a personal assessment.

Alexandrite laser technology operates at a wavelength of 755 nm and is widely used for laser hair removal. Nd:YAG technology operates at 1064 nm and is commonly used across a broader range of skin tones, including darker skin types. The availability of both technologies allows the treatment approach to be adapted to the individual client rather than applying the same settings or wavelength in every case.

"Different skin and hair characteristics require different considerations. Our goal is to provide each client with an individual assessment before treatment rather than using a one-size-fits-all approach," said Dr. Hisham Adem, founder and owner of Lumière Skin Düsseldorf.

A central part of the Lumière Skin Düsseldorf concept is consultation before treatment. Clients can receive a [free personal consultation, hair analysis and complimentary test treatment](#) before deciding on a treatment plan.

The consultation provides an opportunity to assess individual skin and hair characteristics, discuss expectations, explain the available laser technologies and answer questions before treatment begins. The test treatment also gives clients an opportunity to experience the procedure before committing to a treatment package.

Reflecting Düsseldorf's international population, consultations at Lumière Skin Düsseldorf are available in German, English and Arabic. The multilingual approach is intended to make detailed consultation more accessible to clients from different cultural and linguistic backgrounds and to support clear communication throughout the treatment process.

Lumière Skin Düsseldorf will offer laser hair removal for a range of body areas, including the face, underarms, arms, legs, back and other treatment areas. Services will be available for both women and men.

Further information about Lumière Skin Düsseldorf, its laser technologies and services is available at <https://lumiere-skin.de>.

The opening comes at a time of growing interest in professional laser hair removal in Germany and internationally. Many consumers are seeking longer-term alternatives to repeated shaving, waxing and other temporary hair-removal methods. At the same time, awareness is increasing around the importance of considering individual skin characteristics when selecting laser technology and treatment parameters.

Lumière Skin Düsseldorf aims to combine modern laser technology with transparent consultation, individualized treatment planning and multilingual client communication.

Additional educational information about laser hair removal, Alexandrite 755 nm and Nd:YAG 1064 nm technology is available through the [Lumière Skin Düsseldorf online guide](#).

Lumière Skin Düsseldorf is located at:

Höhenstraße 23
40227 Düsseldorf
