

Sisu Energy & Environmental Acquires Helical Energy

Acquisition expands Sisu's clean energy platform into waste-heat recovery systems that increase power output without incremental harmful emission

TULSA, OK, UNITED STATES, August 24, 2026 /EINPresswire.com/ -- Sisu Energy & Environmental LLC ("Sisu"), a clean energy company whose engineered solutions help power providers protect America's communities and environment, announced that it has acquired Helical Energy, Inc. ("[Helical](#)"), a leading provider of patented waste-heat recovery, steam-generation, and power-production systems.

Helical designs systems that capture otherwise-wasted heat from gas turbine exhaust and convert it into useful electric power.

The acquisition expands Sisu's capabilities and positions the combined company as a single-source provider of engineered gas turbine exhaust solutions spanning emissions control, noise abatement, energy recovery, and power production. The combination is especially relevant to data centers and other large energy users racing to add ever-increasing power capacity. Waste-heat recovery helps these facilities remain within permitted emissions limits while increasing power output.

"Helical's differentiated, patented technology and deep engineering expertise are highly complementary to Sisu," said John Hare, CEO of Sisu. "Our customers are being asked to deliver more power, faster, and with a smaller environmental footprint. Together with Helical, we can help them do all three. This acquisition is an important step in Sisu's evolution as a clean energy company serving customers investing in distributed power generation, industrial energy efficiency, and other rapidly growing American energy infrastructure markets."

Mark Wickham, founder of Helical, said, "Helical's steam and power production technology is a clearly compelling product for any power provider looking to meaningfully increase plant efficiency without adding incremental harmful, toxic pollutants into the environment."

Helical will continue serving its existing customers while working jointly with Sisu to build on Sisu's market presence and established relationships.

About Sisu Energy & Environmental

Sisu is a clean energy company providing turnkey emissions-control, acoustic, and energy-recovery solutions for gas turbine applications, including selective catalytic reduction systems, oxidation catalyst systems, noise-abatement equipment, and, through Helical, heat recovery steam generators and power modules. Sisu's "Made in the USA" engineered systems help customers meet their goal of protecting America's communities and environment while delivering the reliable, efficient power that the nation's growing energy infrastructure demands.
