

AAPC Introduces Codie™, an AI assistant for medical coding.

New AI assistant embeds AAPC's authoritative coding guidance into Codify by AAPC, helping coding professionals make faster defensible coding decisions.

SALT LAKE CITY, UT, UNITED STATES, August 25, 2026 /EINPresswire.com/ -- [AAPC](#), the healthcare industry's leading authority on medical coding, education, and revenue cycle expertise, introduced [Codie](#), an AI-powered coding assistant that puts AAPC guidance directly into coding professionals' workflows.

“

Healthcare organizations are looking for AI solutions that not only create more efficiency, but solutions they can trust.”

Mike Marasch

Unlike general-purpose AI tools or search assistants, Codie draws exclusively on AAPC's proprietary medical coding content and expert-validated resources, reflecting the standards trusted by healthcare organizations and coding professionals worldwide. Each answer links back to its source in [Codify](#) by AAPC, giving coders a clear path to the underlying guidance.

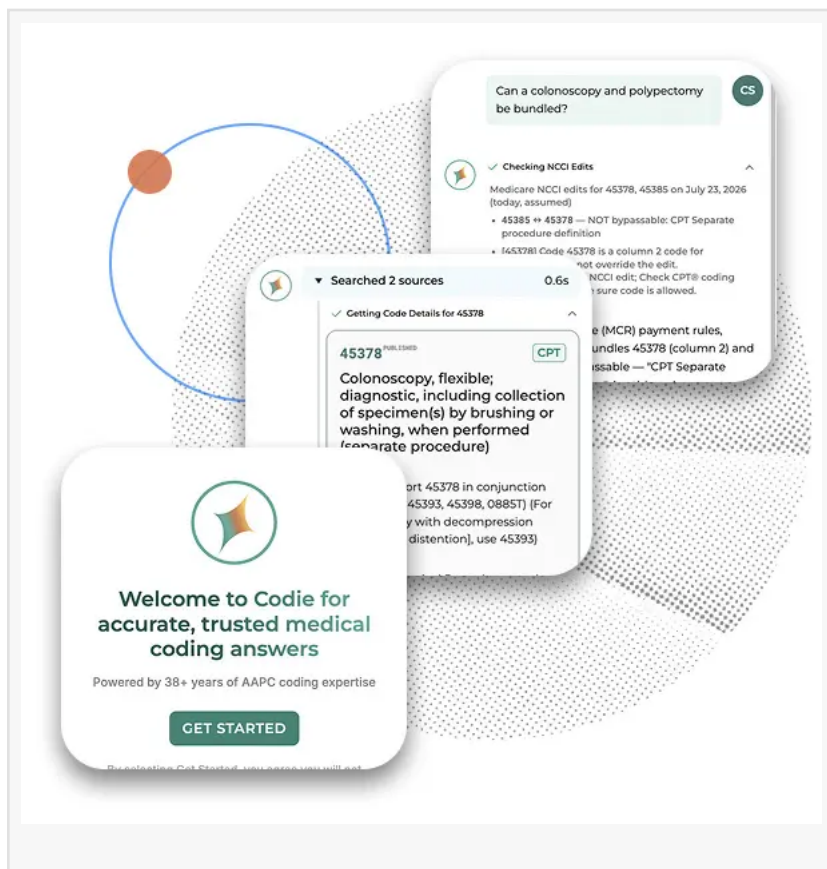

Codie acts as an expert partner to coders in their everyday work, helping them research complex scenarios, validate decisions, and navigate documentation ambiguity without leaving Codify by AAPC. "Healthcare organizations are looking for AI solutions that not only create more efficiency, but solutions they can trust," said Mike Marasch, Head of Product. "Codie combines the speed of AI with the authority of AAPC's coding expertise, giving coders a trusted partner that helps them work through questions while keeping their knowledge and judgment at the center of every coding decision."

Medical coding continues to grow more complex as CPT®, ICD-10-CM, HCPCS Level II, payer policies, and documentation requirements evolve. Coders often consult several sources or seek input from senior staff before resolving an issue.

Codie makes that process easier by offering:

- AAPC-backed guidance available at any time
- AI-assisted interpretation of complex coding scenarios
- Clear responses that flag documentation gaps for coder review
- Faster answers without searching multiple resources
- Greater alignment in coding decisions across teams

For healthcare organizations and revenue cycle teams, Codie helps senior coders spend less time answering routine questions and more time on higher-level work. It also enables teams to reach well-supported conclusions grounded in AAPC guidance.

Codie will be generally available August 25, 2026, as an add-on for Codify by AAPC Pro Fee Coder subscribers.

About AAPC

AAPC is the nation's largest training and credentialing organization for the business of healthcare, serving medical coders, billers, auditors, compliance professionals, practice managers, and revenue cycle professionals worldwide. Through education, certification, and industry-leading coding resources, AAPC helps healthcare organizations improve compliance, accuracy, and financial performance.
