

ZenYTE Holdings and Made in USA Inc. (OTC: USDW) Unveil a Public-Market Infrastructure for Independent Healthcare

A repeatable portfolio framework connecting independent healthcare practices with institutional scale, long-term capital and trusted healthcare data.

BOCA RATON, FL, UNITED STATES, August 25, 2026 /EINPresswire.com/ -- [ZenYTE Holdings Corp.](#)

“

We believed the missing piece wasn't the doctors or the investors—it was the infrastructure between them.”

Austin Reiser, ZenYTE Holdings Corp.

(“ZenYTE”) and [Made in USA Inc.](#) (OTC: USDW) today announced a strategic relationship designed to create a new public-market pathway for independent healthcare practices—giving doctors the ability to participate in the value created through institutional scale without requiring them to give up the clinical and operational independence that made their practices successful.

For independent doctors and practice owners, the model is designed to create something that has historically been

difficult to access: the ability to remain independent while becoming part of something significantly larger. ZenYTE brings together the technology, financial organization, audit preparation, transaction infrastructure and portfolio construction required to help independent practices prepare for, partner with, and participate in institutional and capital-market opportunities.

For long-term investors, the same infrastructure is designed to create access to purpose-built portfolios assembled from real operating healthcare businesses with established revenue histories. ZenYTE has already verified over \$100 million in practice collections directly from supporting financial records, while building relationships with a substantially broader network of independent practices that management believes can support the development of multiple healthcare portfolios over time.

The larger opportunity is that the model is designed to repeat. Rather than constructing a single healthcare roll-up, ZenYTE is building an adaptable portfolio architecture through which qualifying independent businesses can be organized into purpose-built portfolios around different market opportunities, specialties, strategic objectives and long-term partnerships. Each portfolio can be built, financially organized and prepared for institutional participation—and the

infrastructure can then be applied again to the next portfolio. One portfolio is a transaction. A repeatable portfolio system is infrastructure.

That repeatability creates a different opportunity for capital. Portfolios built from established operating healthcare businesses can become platforms for strategic ventures, long-term financial partnerships, technology deployment, acquisitions, ancillary services and investments that would be difficult for a single independent practice to pursue on its own. Zenyte's philosophy is that capital should strengthen physician leadership rather than replace it: doctors continue doing what they do best, while the portfolio creates the scale and financial infrastructure through which long-term partners can participate in the value those businesses create.

The relationship with USDW also creates a pathway into what the companies believe could become one of healthcare's most important long-term assets: trusted data. USDW has developed infrastructure around data provenance, verification, certification and permissioned data systems, including DataWallet™ technology, ERP and IoT capabilities and blockchain-based verification infrastructure. USDW has also publicly announced a proposed venture in the life sciences business segment proposed healthcare and life-sciences initiative that focuses on secure, verifiable and permissioned data ecosystems. As the Zenyte portfolio ecosystem develops, the Company expects to evaluate how trusted-data infrastructure can support participating practices, clinical and research applications, responsible AI, and a longer-term future in which patients can exercise greater transparency and control over how their healthcare data is permissioned and used.

"We didn't start by asking how to aggregate healthcare," said Austin Reiser of Zenyte Holdings. "We started by asking why independent physicians, long-term capital and the technologies shaping the future of healthcare have been so difficult to connect without compromising physician independence. We believe the missing piece is the infrastructure between them. Build that infrastructure correctly, and a doctor does not have to choose between independence and scale. Investors do not have to choose between established operating businesses and long-term opportunity. And healthcare can begin building a financial and data ecosystem around the people it was supposed to serve in the first place."

About Zenyte Holdings Corp.

Zenyte Holdings Corp. builds institutional infrastructure around independent businesses by combining technology, financial organization, systems integration, diligence preparation, transaction design and portfolio development into a unified framework.

Zenyte refers to this process as Portfolio Manufacturing™: integrating independent operating businesses, financial information, technology, professional advisors, strategic partners and capital-market pathways into purpose-built institutional portfolios. The model is designed to allow independent business owners to participate in the opportunities created through greater scale while preserving the leadership, identity and operating strengths responsible for creating

the underlying value.

About Made in USA Inc.

Made in USA Inc. (OTC: USDW) is a publicly quoted technology company developing infrastructure focused on data provenance, certification, verification and digital trust. The company's disclosed technology infrastructure includes AI-enabled verification tools, blockchain frameworks, ERP systems with IoT integration and modular DataWallet™ technology.

USDW has also announced that the Company is pursuing a proposed initiative that is being designed to extend its data-wallet and certification technologies into healthcare and life sciences through secure, verifiable and permissioned data ecosystems. Within the Zenyte relationship, USDW is intended to provide a public-market pathway while creating opportunities to evaluate complementary technologies, strategic ventures and other portfolio-level initiatives.

Forward-Looking Statements

This press release contains forward-looking statements regarding proposed portfolio formations, strategic relationships, public-market transactions, financings, acquisitions, joint ventures, technology integrations, healthcare-data initiatives, capital formation and other future business opportunities.

Forward-looking statements reflect current expectations and objectives and are subject to risks, uncertainties, market conditions, regulatory requirements and other factors that may cause actual results to differ materially. Contemplated transactions remain subject to diligence, negotiation and execution of definitive agreements and, where applicable, audits, financing, regulatory approvals, securities-law compliance and other closing conditions.

References to potential portfolio scale, enterprise value, future partnerships, healthcare-data applications and other opportunities describe management's objectives and expectations and do not constitute guarantees, forecasts of market capitalization, offers to sell securities or solicitations of an offer to buy any security.
