

MOBI Technologies Starts September Baby Safety Month with Four Baby Care Products

MOBI highlights practical health and nursery products that help parents care for their babies at home.

LOS ANGELES, CA, UNITED STATES, August 25, 2026 /EINPresswire.com/ -- MOBI Technologies today announced the start of its September Baby Safety Month campaign. The campaign highlights four practical products designed to help parents and caregivers manage common baby-care needs at home.

“

We want to give families simple tools that make daily care easier. Parents can begin with what they need now and add other MOBI products as their needs change.”

*David Naghi, President of
MOBI Technologies*

The featured products are the MOBI [Pacifier Thermometer](#), Automatic [Baby Nasal Aspirator](#), ENT Otoscope Jr., and [MobiCam MP](#) Baby Monitor.

Each product supports a different part of baby care. Parents can check a baby’s temperature using a familiar pacifier-style design, help clear a stuffy nose, get a closer

look inside the ear, or monitor their baby from another room.

“Caring for a baby comes with many different needs, and those needs can change as a child grows,” said David Naghi, President of MOBI Technologies. “We want to give families simple tools that can make daily care easier. Parents can begin with the products they need now and add other MOBI products as their family’s needs change.”

The MOBI Pacifier Thermometer gives parents a familiar and gentle way to check a baby’s temperature. Taking a temperature can sometimes be difficult when a baby is tired, uncomfortable, or restless. The pacifier-style design provides parents with a simple option that may feel more familiar to the baby.

Instead of trying to hold a traditional thermometer in place, parents can use the familiar pacifier form to help make the process feel more natural. The digital display provides an easy-to-view temperature reading, allowing caregivers to check the result clearly.

The Pacifier Thermometer can be kept with other baby-care essentials so it is available when a parent notices that their baby feels warm or is showing signs of discomfort. Its simple design

makes it a useful addition to a nursery, diaper bag, or family health kit.

The MOBI Automatic Baby Nasal Aspirator is designed to help remove mucus when a baby has a stuffy nose. It has five adjustable suction levels, allowing parents to choose a comfortable setting based on their baby's needs.

The aspirator also includes four soft silicone tips, an LED display, three music options, and a rechargeable battery. The built-in music can help distract and comfort the baby during use.

Its compact design makes it easy to keep with other baby-care products at home or take along while traveling. By helping clear a blocked nose, the aspirator may support more comfortable breathing, feeding, and rest.

The MOBI ENT Otoscope Jr. helps parents and caregivers get a closer look inside the ear. It features a high-definition camera, six LED lights, multi-axis stabilization, and three reusable speculums.

The otoscope connects to the MOBI Smart App and displays the camera view on a compatible smartphone. This gives parents a clear, close-up view of the ear on their phone screen. Parents can use the images to observe visible concerns and decide whether they should contact a pediatrician or another qualified healthcare professional. Images may also be saved and shared with a healthcare provider when appropriate.

The ENT Otoscope Jr. is designed for observation at home. It does not diagnose an ear infection or replace advice, diagnosis, or treatment from a qualified medical professional.

The MobiCam MP Baby Monitor helps parents and caregivers check on their baby from another room through live video on a compatible smartphone.

The camera provides high-resolution live video. It also includes remote pan-and-tilt viewing, infrared night vision, two-way audio, and motion alerts.

MobiCam MP supports both 2.4 GHz and 5 GHz Wi-Fi. It also uses Bluetooth during setup to help

MOBI baby care essentials for everyday comfort, health checks, and connected nursery monitoring.

make connecting the camera easier.

The system is expandable, allowing families to add compatible cameras as their needs change. A family may begin with one camera in the nursery and later add cameras in a play area, another child's room, or a parent's room.

Parents can view compatible MobiCam cameras through the MOBI Smart App, helping them create a monitoring setup that fits their home and family.

MOBI's September Baby Safety Month campaign focuses on practical products that support parents through common baby-care routines.

The Pacifier Thermometer provides a familiar and gentle approach to checking a baby's temperature. The Automatic Baby Nasal Aspirator helps clear a stuffy nose while using music to help distract and comfort the baby. The ENT Otoscope Jr. provides a closer look inside the ear, and the MobiCam MP provides expandable video monitoring throughout the home.

MOBI will continue its September Baby Safety Month campaign throughout September with a focus on baby health, nursery monitoring, and simple tools for everyday family care.
