

TOPGREENER Launches Mid-Size Duplex-to-Decorator Outlet Cover for No-Rewire Outlet Refreshes

New TG cover gives standard duplex receptacles a cleaner decorator-style appearance while adding mid-size coverage for common wall imperfections.

IRVINE, CA, UNITED STATES, August 26, 2026 /EINPresswire.com/ -- An updated room can still feel visually unfinished when a standard duplex outlet stands apart from newer decorator-style switches and controls. Replacing an older wall plate can also expose paint lines, drywall imperfections or uneven cutouts around the electrical box.

NEW PRODUCT

Refresh the Look. Keep the Outlet.

TG Mid-Size Duplex-to-Decorator Outlet Cover

WHITE LIGHT ALMOND IVORY BLACK GOLD

An easy retrofit that gives existing duplex outlets a cleaner, decorator-style finish.

Uses Existing Outlet No Rewiring Required Five Finish Options

TOPGREENER Mid-Size Duplex-to-Decorator Outlet Cover Refreshes Existing Duplex Outlets Without Rewiring

TOPGREENER is addressing both details with the launch of the TG Mid-Size Duplex-to-Decorator Outlet Cover, a practical retrofit that gives an existing standard duplex receptacle a cleaner decorator-style appearance without replacing or rewiring the outlet.

Rather than changing the electrical device itself, the TG cover fits over the existing duplex receptacle and creates a rectangular decorator-style center while preserving the familiar outlet configuration underneath. This allows it to coordinate more naturally with nearby rocker switches, dimmers, sensors, USB receptacles and other decorator-format wiring devices.

The mid-size design adds another practical benefit. Measuring 4.88 by 3.11 inches, the wall plate extends beyond a standard-size plate to help conceal paint gaps, uneven wall openings, drywall imperfections and other marks that may become visible when an older plate is removed. The additional coverage can make a cosmetic outlet refresh easier without automatically turning minor wall blemishes into a separate patching project.

Installation is designed to keep the update focused on the cover rather than the receptacle itself. Integrated rear tabs help hold the cover in position, while the included 0.7-inch mounting screw secures the assembly. The installation can be completed with common household tools and

requires no changes to the receptacle wiring.

The cover is made from flexible polycarbonate thermoplastic with heat-resistant properties and is designed for long-term everyday use. Its surface is also designed to resist fading and smudges, helping maintain a clean appearance over time. The product is ETL Listed.

A gloss wall-plate finish is paired with a matte center section, creating a subtle distinction between the surrounding plate and the decorator-style outlet cover. White, Black, Gold, Light Almond and Ivory options provide choices for coordinating with different wall colors and surrounding wiring devices.

For homeowners, the retrofit can be particularly useful during incremental room updates. A space may receive new decorator-style switches or controls, fresh paint and updated wall plates while its existing duplex receptacles remain fully functional. The TG cover provides a way to bring those outlets into a more consistent visual layout without replacing electrical devices solely for appearance.

The same approach may also be useful in rental properties, offices and common areas where multiple visible outlets are being refreshed while the existing receptacles remain in service.

Availability

The TG Mid-Size Duplex-to-Decorator Outlet Cover is available in White, Black, Gold, Light Almond and Ivory. Single packs are available through the TG product page on the [TOPGREENER website](#). For projects involving multiple outlets, the [TG Amazon listing](#) offers 5-, 10- and 20-pack configurations, with pack size and color availability varying by selection. Contractors, property managers and other customers planning larger-volume purchases can also [request a quote](#) through TOPGREENER.

By combining a decorator-style appearance, additional wall coverage and a no-rewire retrofit approach, the new TG cover provides a practical way to update a small but highly visible electrical detail in residential and light-commercial spaces.

About TOPGREENER

TOPGREENER is an Orange County, California-based electrical products company focused on practical, technology-driven solutions for residential and commercial spaces. Its portfolio spans wiring devices, lighting controls, charging and power-access solutions, sensors, timers and other electrical products designed for modern everyday use. Serving both consumers and professionals, TOPGREENER emphasizes quality, reliability and practical convenience in the electrical solutions it develops.
