

DogPay supports global businesses in opening multi-currency bank accounts in the US, Singapore, and Hong Kong online.

DogPay expands its global corporate banking platform, allowing businesses to apply for US, Hong Kong, and Singapore corporate bank accounts online in one step.

HONG KONG, AK, UNITED STATES,
August 26, 2026 /EINPresswire.com/ --
Online Applications for U.S., Hong Kong
and Singapore [Business Bank
Accounts](#): [DogPay](#) Expands Its
Enterprise Global Account Platform

One platform connects multi-currency
accounts, international collections,
corporate payments, card
infrastructure and payment APIs

DogPay today announced the
expansion of its Enterprise Global
Account platform, providing business customers with online application services for U.S. dollar
accounts in the United States and multi-currency bank accounts in Hong Kong and Singapore.

The announcement represents a broader development of DogPay's enterprise financial
infrastructure. Rather than treating a bank account as a standalone product, DogPay connects
business accounts with international collections, corporate payments, currency management,
card services and payment APIs.

Connecting Business Accounts with Cross-Border Operations

Companies operating across markets often manage customer collections, supplier payments,
operational expenses and different currencies through separate providers and systems.

DogPay Enterprise Global Account brings these functions together through a unified platform. Its
principal capabilities include:

- U.S. dollar account options in the United States;
- Multi-currency account options in Hong Kong and Singapore;
- International collections from customers, platforms and commercial partners;

DogPay expands its global corporate banking platform, allowing businesses to apply for US, Hong Kong, and Singapore corporate bank accounts online in one step.”

DogPay

- Overseas payments to suppliers, service providers and business partners;
- USD transfers through local and international payment networks;
- Centralized management of USD, EUR, HKD and other supported currencies;
- Settlement between supported digital assets and fiat currencies;
- Transaction records, account reconciliation and financial reporting;
- API integration with enterprise finance, treasury and

payment systems.

These capabilities support business scenarios including cross-border trade, international e-commerce, digital services, SaaS subscriptions, technology procurement, advertising expenditure, contractor payments and multi-market treasury operations.

More Than a Business Bank Account

Enterprise Global Account is one component of DogPay’s broader product ecosystem. DogPay’s other enterprise services include:

Bank-as-a-Service

API-based account and payment infrastructure that allows platforms and financial technology companies to embed virtual account capabilities into their own products.

Card-as-a-Service

Infrastructure for issuing and managing virtual and physical cards, including card controls, corporate expense management and settlement functions.

Crypto Payment Gateway

Merchant payment infrastructure for accepting supported digital-asset payments and managing transaction settlement through a unified interface.

Payment-as-a-Service

APIs, SDKs, plug-ins and webhooks that allow e-commerce platforms, websites, applications, SaaS products and digital services to integrate payment functions.

Fiat Acquiring and Cross-Border Payments

Payment acceptance and settlement capabilities for businesses collecting funds and making payments across different markets.

Together, these services allow businesses to connect accounts, payments, cards and settlement through a single technology platform.

Built for Modern Cross-Border Businesses

DogPay Enterprise Global Account is designed around the operational needs of companies that collect revenue internationally, pay overseas suppliers, manage distributed teams or connect financial services to their own products.

A SaaS company, for example, may use an enterprise account to receive international customer

payments, issue corporate cards for software and advertising expenses, and connect transaction data to its internal finance system.

A cross-border trading company may use the platform to receive payments from commercial partners, manage funds in different currencies and make payments to overseas suppliers.

A fintech or digital platform may use DogPay's APIs to combine account, payment and card capabilities within its own customer experience.

By connecting these functions, DogPay is positioning Enterprise Global Account as the financial operating layer within a broader enterprise payment infrastructure—not simply as an account-opening service.

Account availability, supported currencies, service functions and final approval depend on the applicant's business profile and the requirements of the relevant financial institutions. Services are not offered in Mainland China or certain restricted regions.
