

VARStreet Platform Now Supports Enhanced Payment Processing with the New 'Authorize.Net – Accept Hosted' Integration

Resellers using VARStreet can now process payments through Authorize.Net's hosted payment technology that supports Level 2 and Level 3 transaction data.

BURLINGTON, MA, UNITED STATES, August 26, 2026 /EINPresswire.com/ -- VARStreet Inc., a

“

This integration helps our customers align their payment processing with modern security and reporting requirements while giving them richer transaction data to work with.”

Shiv Agarwal, Vice President - Sales, VARStreet

premier provider of [enterprise software solutions](#) for IT and office-supply value-added resellers (VARs) in the USA and Canada, is pleased to announce a new payment gateway option, "Authorize.Net – Accept Hosted," now available in the Authorize dropdown of the CC Authorizer module. The new integration uses Authorize.Net's hosted payment technology to support stronger security and modern payment capabilities. The existing Authorize.Net integration will continue to remain available, allowing customers to move to the new option at their own pace.

The upgraded integration supports 3D Secure (3DS) authentication for additional protection against fraudulent

transactions. 3D Secure is enabled by default and is mandatory for eligible transactions; the feature cannot be disabled, ensuring consistent security across all supported payment flows.

"We're excited to bring a more secure and feature-rich payment processing experience to our resellers," said Shiv Agarwal, Sales and Marketing Director at VARStreet Inc. "This integration helps our customers align their payment processing with modern security and reporting requirements while giving them richer transaction data to work with."

The new integration also supports Level 2 (L2) and Level 3 (L3) transaction data, allowing businesses to submit enhanced transaction details, such as order numbers, tax information, and line-item detail, that may help qualify for lower interchange rates where applicable and improve transaction reporting.

Together, these enhancements give VARStreet [eCommerce platform](#) users a more secure,

feature-rich, and future-ready payment processing experience. The richer transaction data also improves payment transparency and supports better reconciliation, helping organizations align their payment processing with modern security and reporting standards.

The "Authorize.Net – Accept Hosted" integration is available now for all VARStreet BackOffice resellers. It is the latest in a series of platform enhancements designed to help resellers operate more securely and keep their platforms aligned with modern payment and security standards.

About VARStreet Inc.

Founded in 1999, VARStreet Inc. provides a unified business management platform that offers [quoting software](#), B2B eCommerce, CRM, procurement, and PunchOut solutions.
