

OmniMD Named to DHN Top Healthcare Innovators 2026 List for Two Decades of EHR, RCM and Interoperability Work

Digital Health News honored OmniMD at its Ahmedabad City Meetup for EHR, RCM and interoperability work serving 12,000+ U.S. medical professionals.

HAWTHORNE, NY, UNITED STATES, August 26, 2026 /EINPresswire.com/ -- OmniMD, a U.S.-based healthcare technology company that has built electronic health record (EHR), [revenue cycle management](#) (RCM), and interoperability systems for American medical practices since 2002, has been named to the DHN Top Healthcare Innovators 2026 list by Digital Health News (DHN). The recognition was presented on August 22 at the DHN City Meetup in Ahmedabad, Gujarat, an event that convened hospital administrators, chief operating officers, and healthcare policy stakeholders under the theme "The Digital Health Decade: Gujarat's Moment to Lead."

The award, signed by Vishnu Saxena, Founder and CEO of DHN Media India, cites OmniMD for "shaping the future of healthcare through innovation, impact and purpose."

OmniMD was founded in 2002 by Divan Dave, who continues to serve as the company's Chief Executive Officer. Headquartered in Hawthorne, New York, the company built its early business around specialty-specific EHR templates and claims management tools for independent physician practices, at a time when most electronic records vendors were focused on large hospital systems.

Over the following two decades, OmniMD expanded its platform to include practice

management, telehealth, remote patient monitoring, and a health information exchange layer called OmniXchange, which supports data transfer using FHIR, HL7, JSON, and XML standards with laboratories and other electronic health record systems.

The company's [EHR platform](#) holds ONC certification and is used by more than 12,000 medical professionals across over 20 clinical specialties, including cardiology, primary care, internal medicine, psychiatry, and pediatrics.

In 2025, OmniMD introduced a set of AI-enabled tools, including an [AI medical scribe](#), an AI-driven front desk product for scheduling and insurance eligibility checks, and an automated claims and denial management system, extending its RCM and documentation offerings into generative AI.

"This recognition reflects work that started with a handful of people trying to give independent physicians the same clinical and financial tools that large hospital systems already had," said Divan Dave, CEO of OmniMD. "Two decades later, the mandate has not changed. Our job is to keep clinical documentation, billing, and patient records connected to each other so physicians can spend their time on patients rather than on administrative systems that do not talk to one another."

“

Our job is to keep clinical documentation, billing, and patient records connected to each other so physicians can spend their time on patients rather than on administrative systems.”

Divan Dave, CEO of OmniMD

The DHN City Meetup series is organized by Digital Health News across multiple Indian cities in 2026, including Delhi, Mumbai, Hyderabad, and Ahmedabad, bringing together

hospital chief information officers, medical superintendents, clinicians, and healthcare technology companies to discuss digital adoption in Indian hospitals. OmniMD's recognition at the Ahmedabad edition reflects the company's global delivery operations, which support its U.S. client base from both the United States and India.
