

Sage Inc. Earns ISO 27001 Certification, Bringing Enterprise-Level Security Standards to SMB Technology Services

Achievement underscores Sage's belief that security and governance isn't reserved for Fortune 500 companies

NEW YORK, NY, UNITED STATES, August 26, 2026 /EINPresswire.com/ -- Sage Governance and

“

Achieving ISO 27001 gives our clients independent validation that security isn't simply something we promise; it's embedded in how Sage operates.”

Sage Governance and
Technology*

Technology (Sage Inc.) today announced the next milestone in its growth as a leading partner of enterprise-grade technology and cybersecurity for small- and mid-sized businesses. Sage recently achieved [its ISO 27001 certification](#), an internationally recognized standard for information security management systems. This independently audited certification validates Sage's practices for protecting information and managing risk and demonstrates that top-level security management is not exclusively for large companies.

“Many small and mid-sized companies do not have the

resources to easily access enterprise-level cybersecurity, compliance and risk expectations, yet today's business environment brings these types of threats to every business no matter its size,” said Kathleen Hurley, founder of Sage Governance and Technology. “Achieving ISO 27001 gives our clients independent validation that security isn't simply something we promise; it's embedded in how Sage operates.”

ISO 27001 certification is awarded following an independent audit verifying that an organization's information security management system meets stringent international standards. During the assessment, Sage was evaluated against 93 overall security controls across its organization, people, technology and physical measures. The process takes between 3-6 months for an organization of this size.

To navigate the rigorous certification process, Sage partnered with Cyberpath Insight, a leading cybersecurity consultancy known for guiding organizations through complex compliance journeys. The collaboration proved instrumental in aligning Sage's internal controls, policies and procedures with ISO 27001 requirements.

"The partnership was a key component in gaining traction on the certification path," Hurley said. "Cyberpath Insight brought deep expertise and a structured approach that allowed us to move confidently through each stage of the process. This certification is a reflection of the hard work of our entire team and the strength of that partnership."

ISO 27001 certification operates on a continuing cycle. This achievement is only the beginning of an ongoing governance lifecycle that includes audits and eventual recertification.

"With this certification, Sage has shown that sound information security governance is possible for small businesses too," said Cyber Path Insight Founder and Director Roy Biakpara. "While certification serves as an important milestone, the real and lasting value comes from how an organisation embeds information security into its way of operating, decision making and continual improvement."

Sage's ISO27001 achievement positions the company as a trusted partner for clients operating in highly regulated environments, where information security requirements are non-negotiable. As a smaller, remote-first and cloud-based business, Sage shows that implementing an internationally recognized information security management system, with an approach proportionate to risk, size and operating model, can and should be done at all levels.
