

HyperWave Expands Access to Focused Shockwave Therapy with New System and HyperWave Clinics Network

HyperWave combines focused shockwave technology, its proprietary RESET protocol, provider education, and practice support to expand non-invasive care.

LOVELAND, CO, UNITED STATES, September 1, 2026 /EINPresswire.com/ -- HyperWave, a healthcare technology company advancing non-invasive musculoskeletal care, today announced the availability of its HyperWave focused shockwave therapy system for healthcare providers across chiropractic, physical therapy, sports medicine, and other clinical specialties. Built around focused electromagnetic shockwave technology, HyperWave combines advanced treatment technology with provider education, practice support, and a growing clinic network—creating a comprehensive approach designed to make focused shockwave therapy more accessible to both providers and patients.

HyperWave focused shockwave therapy

“

We believe providers deserve technology that supports exceptional patient care while also fitting the realities of running and growing a modern healthcare practice.”

Rory Morgan

An important part of the HyperWave approach is [RESET](#), the company's proprietary treatment protocol built around Restorative Energy Signaling and an Enhanced Tissue Response. RESET provides a structured framework for applying HyperWave therapy to individual patient needs, with treatment plans designed around joint and soft-tissue concerns, mobility limitations, and recovery support. The protocol is intended to help providers deliver a more consistent, individualized approach while allowing treatment to be guided by patient progress.

For providers, HyperWave represents more than another piece of equipment. It is an opportunity to bring advanced, non-invasive treatments into their practice with the education, resources, and support needed to integrate it into everyday clinical care.

For patients, it means another option may be available when dealing with persistent pain and musculoskeletal conditions—without automatically turning to more invasive approaches.

Shockwave therapy continues to gain visibility across sports medicine, physical therapy, chiropractic care, and other musculoskeletal specialties. Research has explored extracorporeal shockwave therapy across a range of conditions, including sports-related injuries and persistent musculoskeletal problems, while researchers and clinicians continue to investigate treatment protocols and best practices. HyperWave was created to help bring the capabilities of focused shockwave technology to more healthcare providers and ultimately, more patients.

“HyperWave was built around a simple question: how do we make advanced shockwave technology more accessible while giving providers the support they need to actually use it successfully?” said Rory Morgan, CEO and Founder of HyperWave. “We believe providers deserve technology that supports exceptional patient care while also fitting the realities of running and growing a modern healthcare practice. At the same time, patients deserve access to more options when they're looking for non-invasive approaches to helping with persistent pain.”

The HyperWave system is designed to deliver focused energy at treatment depths of up to 120 millimeters, giving providers the ability to target structures at varying depths as part of an individualized approach to patient care. What makes HyperWave different is not simply the technology itself. The company has built its model around helping providers successfully bring shockwave therapy into their practices. This means access to technology backed by resources intended to help bridge the gap between purchasing a system and successfully implementing it. That distinction matters. Adopting new healthcare technology requires more than equipment. Providers need to understand the technology, determine where it may fit within patient care, educate their teams, communicate appropriately with patients, and integrate treatment into their existing workflows. HyperWave's provider-focused model is built to support that process.

The technology is only one part of the HyperWave story. The larger goal is access. As more healthcare providers adopt focused shockwave therapy, more patients can discover whether the technology may be appropriate for their individual needs.

HyperWave is expanding that access through the HyperWave Clinics network, connecting patients with providers offering HyperWave therapy in communities across the country. Patients can visit <https://www.hyperwaveclinics.com/> to learn more about HyperWave, explore conditions for which shockwave therapy may be considered, and find a HyperWave clinic. For patients who have been searching for additional options for persistent musculoskeletal concerns, the growing HyperWave network provides a new place to start a conversation with a qualified healthcare provider.

HyperWave's vision extends beyond putting more devices into more clinics. The company is working to create a growing ecosystem connecting technology, providers, education, and patients—with the goal of making focused shockwave therapy easier to access and easier for providers to implement responsibly. Healthcare providers interested in bringing HyperWave technology into their practice can visit <https://www.hyperwavemedical.com/> to learn more about the system, provider resources, and opportunities to become a HyperWave provider.

About HyperWave

HyperWave is a healthcare technology company focused on advancing non-invasive musculoskeletal care through focused shockwave therapy. The HyperWave system utilizes focused electromagnetic shockwave technology designed to deliver targeted acoustic energy at treatment depths of up to 120 millimeters. HyperWave supports healthcare providers with technology, education, and practice resources while expanding patient access through its growing network of HyperWave Clinics. Learn more at <https://www.hyperwavemedical.com/> and <https://www.hyperwaveclinics.com/>.
