

Driveway King Highlights Colorado Springs Driveway Replacement Before Winter

As winter approaches, Driveway King explains when aging concrete driveways in Colorado Springs should be repaired or fully replaced.

COLORADO SPRINGS, CO, UNITED STATES, August 26, 2026 /EINPresswire.com/ -- As Colorado Springs approaches another winter, [Driveway King](#) is outlining how homeowners can tell when an older concrete driveway needs full replacement instead of another temporary repair.

The company provides [concrete driveway replacement](#) in Colorado Springs, with a focus on removing failed concrete and rebuilding the driveway from the ground up for Colorado conditions.

A cracked driveway does not always need to be replaced. One small, stable crack may be repairable. Full replacement becomes the more practical option when several sections are broken, slabs have sunk or lifted, water collects near the garage, edges are crumbling, the surface is flaking, or earlier repairs continue to open. These problems can point to failure below the concrete, not just damage on top.

“

We install concrete driveways built for Colorado”

Daniel Flansburg

“A driveway can look good the day it is poured and still be built wrong,” said Daniel Flansburg, owner of Driveway King. “The ground, base, steel, concrete mix and joints matter. Colorado will test every one of them.”

Driveway King recommends that a driveway replacement

begin with a clear review of the property. The contractor should measure the driveway, check slope and drainage, identify concrete that will remain, and explain how the new driveway will

Concrete Driveway Replacement in Colorado Springs

meet the garage, sidewalk, curb and street.

The written scope should clearly state what will be removed, how the old concrete will be hauled away, what base preparation is included, how the new slab will be reinforced, how thick the concrete will be, what finish will be used and where the control joints will be placed. The warranty should also be provided in writing.

A complete concrete driveway replacement normally includes demolition, hauling away the old concrete, excavation where needed, base preparation, forming, steel reinforcement, concrete placement, broom finishing, control joints, curing and final cleanup.

Steep grades, limited access, drainage problems, soft ground, retaining walls and connections to sidewalks or curbs can change the scope and price. These conditions should be identified before the project begins.

This level of detail allows homeowners to compare estimates based on what is actually included, not just the total at the bottom of the page. It also helps prevent missing work, unclear allowances and unexpected charges after construction begins.

"The best time to evaluate a failing driveway is before snow and ice cover the damage," Flansburg said. "Fall gives the property owner a clear view of the cracks, low areas and drainage problems, along with time to define the work correctly."

Driveway King focuses on concrete driveways only. Services include complete driveway removal and replacement, new concrete driveway installation, driveway extensions and selected concrete driveway repairs.

Projects are built around clear written standards for the base, steel, concrete mix, slab thickness, drainage, joint layout, finish and warranty. The purpose is simple: concrete driveways built for Colorado, with the construction details defined before work begins.

Driveway King serves Colorado Springs and selected Front Range communities. Estimate

requests and additional information are available through [DrivewayKing.com](https://www.drivewayking.com).

About Driveway King
