

XSponse Integrates Critical Response Group Mapping to Strengthen Emergency Communications and Facility Intelligence

The integration brings together real-time emergency communications and detailed response maps allowing first responders act faster when every second counts

MIAM, FL, UNITED STATES, August 27, 2026 /EINPresswire.com/ -- [XSponse](#), a leader in emergency communications

and response technology, today announced a technology integration with [Critical Response Group](#) (CRG), the developer of Collaborative Response Graphics® (CRGs®), bringing standardized location intelligence directly into the XSponse platform to help organizations improve emergency preparedness, coordination, and response.

“

Integrating CRG's trusted emergency response maps into the XSponse platform strengthens that shared operational picture, helping organizations make more informed emergency response decisions”

Lee Mandel, CEO XSponse

The integration embeds CRG's industry-leading emergency response maps within the [XSponse ecosystem](#), providing security teams, school administrators, incident commanders, and first responders with immediate access to detailed building intelligence alongside real-time alerts, communications, and incident information. By connecting accurate and verified location data with emergency communications, organizations gain a shared operational picture that supports faster decision-making and more coordinated response efforts.

Whether responding to incidents in schools, healthcare facilities, corporate campuses, or critical infrastructure, users can view building layouts, entry points, key assets, and other critical building information within the same environment used to manage emergency communications, eliminating information gaps and improving coordination from the initial alert through incident resolution.

"Our customers need more than emergency notifications; they need connected intelligence that helps security teams, administrators, and first responders work from the same information in

real time," said Lee Mandel, Chief Executive Officer of XSponse. "Integrating CRG's trusted emergency response maps into the XSponse platform strengthens that shared operational picture, helping organizations make more informed decisions before, during, and after an emergency."

Critical Response Group's Collaborative Response Graphics® are trusted by schools, healthcare organizations, corporations, government agencies, and public safety organizations nationwide to provide standardized, easy-to-understand facility intelligence that enhances emergency response.

"CRG was built on the belief that standardized location intelligence should work seamlessly across the technologies organizations already rely on," said Michael Rodgers, Chief Executive Officer of Critical Response Group. "Integrating our Collaborative Response Graphics with XSponse extends that vision by bringing trusted location intelligence into another powerful emergency communications platform, helping customers create a more connected and informed response ecosystem."

By combining XSponse's emergency communications, wearable safety technologies, location awareness, and automated response capabilities with CRG's common operating picture, organizations can improve collaboration across security teams, administrators, and public safety agencies while strengthening overall emergency preparedness.

Together, XSponse and Critical Response Group are helping organizations eliminate information gaps by delivering real-time communications and trusted location intelligence within a single operational workflow, enabling more coordinated responses and greater confidence when every second counts.

-END-

About XSponse:

XSponse is a comprehensive AI security ecosystem committed to enhancing detection, alerting, and mass notification. Designed and built by integrators, the company's easy-to-install, fully PoE solutions integrate seamlessly into existing infrastructures, providing unparalleled security and peace of mind. From classroom monitoring to enterprise connectivity, XSponse redefines the standard for integrated safety solutions.

About Critical Response Group:

Critical Response Group is the nation's leader in critical incident mapping data, helping organizations and emergency responders establish a common operating picture during emergencies and daily operations. Through Collaborative Response Graphics® (CRGs), CRG OnScene, and a growing ecosystem of technology integrations, CRG provides trusted location

intelligence and situational awareness solutions that improve communication, coordination, and response outcomes across schools, healthcare facilities, government agencies, critical infrastructure, and commercial enterprises nationwide.
