

Texas Investment Firm Post Oak Group to Lead FlyOnE Investment Round

Capital raise to accelerate Air Taxi expansion, electric aviation infrastructure and next-generation aircraft production and deployment

PERTH, WESTERN AUSTRALIA, AUSTRALIA, August 27, 2026 /EINPresswire.com/ -- Australian electric aviation company FlyOnE Limited has formally engaged Texas-based investment firm Post Oak Group to lead its current investment round, supporting the next phase of the company's expansion across Australia and international markets.

Active charging pontoon barges will play a big part in rapid deployment of the Lilypad Air taxi network by FlyOnE

The capital raise will support FlyOnE's continued development as an integrated operating platform for the emerging low-altitude aviation economy, with investment directed across three key areas: Air Taxi network expansion, electric aviation infrastructure rollout, and the production, supply and delivery of next-generation electric aircraft.

“

We have spent years proving that next-generation aviation can operate commercially today — not decades from now”

Korum Ellis, Founder and CEO of FlyOnE

FlyOnE has spent the past several years moving electric and [next-generation aviation](#) from demonstration into commercial operations. The company operates certified passenger air services, flight training and aerial work operations while developing the infrastructure, aircraft supply chain and continued-airworthiness capabilities

required to support a new generation of aircraft.

Importantly, the expansion is being built on an Air Taxi model that has already demonstrated strong commercial economics. Across established operations, FlyOnE has achieved gross returns of approximately 120% above direct operating costs on Air Taxi services, providing a commercially validated foundation from which to scale the network into new markets.

The engagement of Post Oak Group represents the next stage in FlyOnE's capital strategy as the company moves from proving the model to accelerating its deployment.

"We have spent years proving that next-generation aviation can operate commercially today — not decades from now," said Korum Ellis, Founder and CEO of FlyOnE.

"We now have an Air Taxi model demonstrating strong operating economics, real passenger demand and a platform that can be replicated into new markets. This raise is about scaling what we have already built."

"That means expanding our Air Taxi network, deploying the infrastructure required to support electric aviation, and accelerating the production and delivery pathways for the aircraft that will operate across these networks. Bringing Post Oak Group into the raise gives us an experienced US-based investment partner as we take that next step in Australia and beyond."

FlyOnE's strategy combines aircraft operations with the supporting ecosystem required to deploy next-generation aviation at scale. Rather than treating electric aircraft, infrastructure, pilot capability and commercial operations as separate markets, FlyOnE is building an integrated platform connecting each part of the aviation value chain. To date, FlyOnE has completed over 1300 hours of commercialised passenger electric flight across 3 capital cities in Australia, with over 45000 total air taxi passenger movements on its growing [Lilypad Elevate Air Taxi network](#).

The company is currently advancing Air Taxi expansion opportunities in multiple Australian markets while developing electric aviation infrastructure and expanding its next-generation aircraft supply and production capabilities.

The Post Oak-led investment round will provide growth capital to accelerate these initiatives and increase the pace at which FlyOnE can deploy aircraft, infrastructure and commercial services.

Next Gen FlyOnE Air Taxi over Gold Coast

The four pillars of FlyOnE's business development

About FlyOnE Limited

FlyOnE is an Australian public unlisted aviation company building the operating platform for the low-altitude economy. Its activities span certified Air Taxi operations, next-generation aircraft supply and production, electric aviation infrastructure, pilot training, aerial intelligence and continued airworthiness.

FlyOnE has been commercially operating electric aircraft in Australia since 2020 and is focused on making next-generation aviation commercially deployable at scale.

The future is electric
