

InkPact Golf Introduces Instant Clubface Feedback for the Range and the Course

Golf Clubface Impact Printer with VT Vanishing Technology™ and InkPact Micron Spray with its 30-Micron Impact Formula™ make the moment of impact visible

WINDSOR, CA, UNITED STATES, August 27, 2026 /EINPresswire.com/ -- [InkPact Golf](#) today introduced two clubface feedback systems built for different practice environments: the Golf Clubface Impact Printer, powered by VT Vanishing Technology™, for structured range practice, and InkPact Micron Spray, featuring its 30-Micron Impact Formula™, for portable on-course practice. Both make the physical evidence of impact immediately visible on the clubface.

Golfers can see where the ball went. InkPact Golf lets them see where the shot started.

For developing golfers, that can mean identifying heel, toe, high or low contact and learning to find the center of the face more consistently. For accomplished players and coaches, the position, shape and characteristics of the same impact mark can provide deeper information about contact quality, compression and recurring strike patterns. Compression patterns can also provide useful visual feedback when comparing how different golf balls behave at impact, adding another dimension to ball fitting and equipment selection.

One mark. Different levels of feedback.

"Different golfers need different information from practice," said Mo Gutierrez, spokesperson for InkPact Golf. "For one player, seeing a heel strike instead of center contact may be exactly what they need. A better player or coach may read much more from the same mark. InkPact makes impact visible. What you learn from it evolves with your game."

For the Range: Golf Clubface Impact Printer + VT

The Golf Clubface Impact Printer applies a light, consistent coating of VT Vanishing Technology to the clubface. The golfer swings normally, and the resulting mark reveals the point of impact.

The system requires no batteries, sensors, screens or mobile applications. VT is designed to provide clear visual feedback and then disappear, allowing golfers to continue through a range session without constantly stopping to reset the clubface.

The process is simple: Apply. Hit. See. Adjust.

InkPact also allows golfers to test simple setup adjustments before rebuilding their swing. A player can maintain the same grip, tempo and natural motion, adjust position relative to the ball, hit again and immediately see how contact changes. The Golf Clubface Impact Printer is available now at inkpact.golf for \$79.99.

For On-Course Practice: InkPact Micron Spray

For portable on-course practice, InkPact Micron Spray uses a 30-Micron Impact Formula to create an ultra-thin, fast-drying coating that reveals ball contact while keeping the clubface grooves functional.

The InkPact Micron Spray Kit includes a magnetic quick connector and carabiner clip so it can remain attached to the golf bag and accessible whenever feedback is needed during practice. The kit is available now at inkpact.golf for \$29.99.

Both products are built around the same idea: better golf starts with better contact, and better contact starts with better feedback.

The InkPact Golf product collection and training information are available at inkpact.golf.

About InkPact Golf

InkPact Golf, operated by InkPact Corporation in Windsor, California, develops golf training systems that make clubface impact immediately visible. Its products include the Golf Clubface Impact Printer with VT Vanishing Technology™ and InkPact Micron Spray with its 30-Micron Impact Formula™, providing golfers with immediate visual feedback without requiring sensors, batteries, applications or screens.
