

Kripicard Launches Global White-Label Platform for Digital Businesses

NEW YORK, NY, UNITED STATES, August 28, 2026 /EINPresswire.com/ --

Kripicard, a global Web3-focused digital payments and services platform, today announced the launch of its Global White-Label Platform, enabling businesses worldwide to build and offer branded digital services using Kripicard's underlying infrastructure.

Unlike conventional white-label solutions that focus primarily on card products, Kripicard's platform is designed to give eligible partners access to multiple digital services within the [Kripicard ecosystem](#), allowing businesses to create broader and more flexible product offerings under their own brand.

Depending on partner requirements, eligibility, and availability, services may include virtual cards, crypto-powered payments, card funding, social media marketing (SMM) services, gift cards, global eSIM solutions, APIs, and other digital services available through the Kripicard ecosystem.

Built for Digital-First Businesses

The Global White-Label Platform is designed for fintech companies, Web3 businesses, digital agencies, SaaS platforms, entrepreneurs, online marketplaces, and other digital-first businesses seeking to expand their services without investing the time and resources required to develop an entire technology infrastructure from the ground up.

Through the platform, partners can create a branded customer experience while leveraging Kripicard's existing technology, infrastructure, and available digital services. This approach can help businesses accelerate the development of new offerings while maintaining their own brand identity and customer relationship.

A Flexible Approach to Digital Services

Kripicard's white-label model is intended to support businesses with different product and operational requirements. Partners can explore available services based on their business model, technical needs, market focus, and eligibility.

The platform is available to businesses internationally, subject to applicable partnership, technical, operational, regulatory, and service requirements.

The launch is being promoted across international business and technology markets, including Singapore and the United Arab Emirates, as Kripicard expands awareness of its white-label infrastructure among digital businesses worldwide.

About Kripicard

Kripicard is a global Web3-focused digital payments and services platform providing virtual cards, payment infrastructure, APIs, and digital services for businesses and online users worldwide. Through its technology ecosystem, Kripicard aims to provide flexible digital solutions that enable businesses to build and expand their online service offerings.
