

RevaTerra® to Participate in Inaugural Forest Products Innovation Corridor (FPIC) Event

RevaTerra® joins forestry, industry, investment and technology leaders working to accelerate new markets and advance the Southeast's forest bioeconomy

NEWAN, GA, UNITED STATES, September 1, 2026 /EINPresswire.com/ -- [RevaTerra®](#), an advanced

“

Our technology delivers higher performance using existing production infrastructure, making advanced forest-based materials commercially deployable today, not years from now.”

Joe Napier

materials company engineering natural materials into industrial-grade performance, today announced its participation in the inaugural Forest Products Innovation Corridor (FPIC) taking place September 10–11, 2026, in Greenville, South Carolina.

Under the theme “From Forest to Market: Building the Southeast’s Bioeconomy Future,” the program will bring together leaders from the forest products industry, manufacturing, economic development, government, academia, investment and technology to explore how innovation and new market development can strengthen

Southern forest economies.

RevaTerra will join the discussion as an emerging technology company focused on creating new industrial markets for forest-derived materials. The company has developed proprietary processes that transform natural residuals into engineered, industrial-grade advanced biomass products designed for use across energy and other hard-to-decarbonize industries.

“The Southeast has the forest resource, established infrastructure and generations of expertise across the forest products industry,” said Joe Napier, CTO and Co-Founder of RevaTerra. “The opportunity now is to build on those strengths by creating new products, new applications and new markets for the material already available throughout the region. That is what makes the Forest Products Innovation Corridor so important. Bringing forestry, technology, manufacturing, capital and public-sector leadership together can significantly accelerate the path from innovation to commercialization.”

The inaugural FPIC event will explore the state of Southern forest markets, opportunities for landowners and rural communities, investment and commercialization, healthy working forests,

and the development of new forest-based industries. The program will also feature companies, such as RevaTerra, that are advancing innovation across bioenergy, biomaterials, bioproducts, renewable fuels, mass timber and advanced wood products.

The FPIC event will include market outlooks, regional leadership discussions, company innovation presentations, investment and commercialization sessions, and collaborative discussions designed to identify near-term opportunities and priorities for the Corridor.

About RevaTerra

Founded in 2025, RevaTerra is an advanced materials company engineering natural materials into industrial-grade performance. The name RevaTerra means “Renew the Earth,” reflecting its mission to turn what’s abundant into what’s essential. By combining advanced biomass characterization and cutting-edge machine learning, RevaTerra develops intelligent energy technologies that transform forestry and agricultural residues into reliable, high-performance fuels. Designed to integrate seamlessly with existing energy systems, RevaTerra’s solutions support both economic growth and the global transition to a low-carbon future. Learn more at www.revaterra.co.
