

Dacxi Coin (DXI) is coming to Uniswap today.

The listing brings DXI to one of DeFi's largest trading communities as Dacxi Chain builds toward a global crowdfunding network.

SYDNEY, REGION, AUSTRALIA,

September 17, 2026 /

EINPresswire.com/ -- [Dacxi Coin](#) (DXI) lists on [Uniswap](#) today, opening a new way for the global crypto community to access and trade DXI directly on-chain.

DXI is already available through P2B and Wealth99. The move to Uniswap takes it into a different part of the crypto market: decentralised trading, where users connect their own wallets and trade directly through blockchain smart contracts.

“

Bringing DXI to Uniswap puts the coin in front of a much wider decentralised trading community as we move into the next stage of that journey.”

*Craig Smith-Gander, CEO
Dacxi Chain*

For Dacxi, the listing is about more than adding another exchange. It puts DXI in front of a wider DeFi audience as the project continues building the infrastructure behind [Dacxi Chain](#).

Built for one market: global crowdfunding

Dacxi Chain is being built around a simple problem in investment crowdfunding: investor reach.

Today, crowdfunding platforms largely operate as separate markets. A deal listed on one platform can only reach the investors that platform has access to.

Dacxi Chain is building the infrastructure to change that by connecting regulated crowdfunding platforms, allowing deals and investment opportunities to move across platforms and, ultimately, across borders.

The opportunity is significant. Hundreds of regulated crowdfunding platforms already operate around the world, and the European Digital Finance Association estimates the sector could reach

€1 trillion in scale by 2035.

Dacxi is building toward a future where those platforms don't operate as isolated markets, but as part of a much larger connected network.

Why DXI is different

Most major blockchain cryptocurrencies sit behind general-purpose networks built to attract thousands of different applications.

DXI has a different model.

Dacxi Chain is building toward a dedicated AppChain, an application-specific blockchain designed around one sector: global crowdfunding.

That distinction matters because the potential use of DXI is tied to the growth and activity of the Dacxi Chain ecosystem itself.

As more platforms connect, more deals can be shared, more investors can participate and more transactions can move through the network.

At sufficient scale, the long-term plan is for Dacxi Chain to migrate from its current Ethereum Layer 2 infrastructure to a dedicated Dacxi Blockchain, with DXI supporting transaction fees and governance.

The network is already taking shape

Work on that network is already underway. Dacxi Chain has conducted its first cross-platform, cross-border crowdfunding deal, and its first regional platform network is beginning to take shape in the European Union.

At the platform level, Dacxi is also building Ironstone, using AI and blockchain to create the trusted and portable data foundations platforms need to share deals at scale.

Dacxi Chain also launched and supports the Global Equity Crowdfunding Alliance (GECA), which has grown to more than 100 organisations working toward a more connected global crowdfunding industry.

Opening DXI to DeFi

The Uniswap listing is the next step in expanding access to DXI beyond its existing exchange community.

From today, users can access DXI through Uniswap alongside its existing P2B and Wealth99

listings.

The official DXI contract address and trading details are published only at Uniswap.org. Dacxi Chain will never share a contract address by direct message. Verify the address on the official site before trading.

Craig Smith-Gander, Chief Executive Officer, Dacxi Chain, said:

"We're building Dacxi Chain around a very large opportunity: connecting crowdfunding markets that today operate independently. Bringing DXI to Uniswap puts the coin in front of a much wider decentralised trading community as we move into the next stage of that journey."

About Dacxi Chain

Dacxi Chain is building the infrastructure to connect regulated investment crowdfunding platforms into a global network.

Its development begins with trusted platform data through Ironstone, expands into cross-platform and cross-border network infrastructure, and ultimately targets the scale required for a dedicated crowdfunding AppChain supported by Dacxi Coin (DXI).

Dacxi Coin is classified as a utility token, with two independent legal opinions prepared in connection with exchange listings in the EU and Singapore supporting this classification.
