

TECHMAN Part Two Expands Ricky Melwani's Techno-Thriller Series With Mysterious Languages and New Technology

Ricky Melwani expands TECHMAN with Part Two: The Age of Intelligence & Language, exploring medical trials, & AI, as both books go free on Amazon for five days.

LOS ANGELES, CA, UNITED STATES, August 31, 2026 /EINPresswire.com/ -- Australian author Ricky Melwani continues the TECHMAN science-fiction and techno-thriller series with [TECHMAN Part Two: The Age of Intelligence and Language](#), which develops storylines involving unknown languages, medical technology, intelligence operations, and advanced computing.

From September 1–5, 2026, both TECHMAN books will be available free on Amazon: [Techman: Age of Super & Quantum Computing — Part One](#)

Arc 1: Aaron and the Unknown Languages

Unknown languages begin appearing across connected technological systems. Their structures resemble nothing on record, and they change while analysts watch.

Translation systems return nothing.

Aaron Sharma turns his advanced brain chip towards them, using technology that allows him to interpret complex systems.

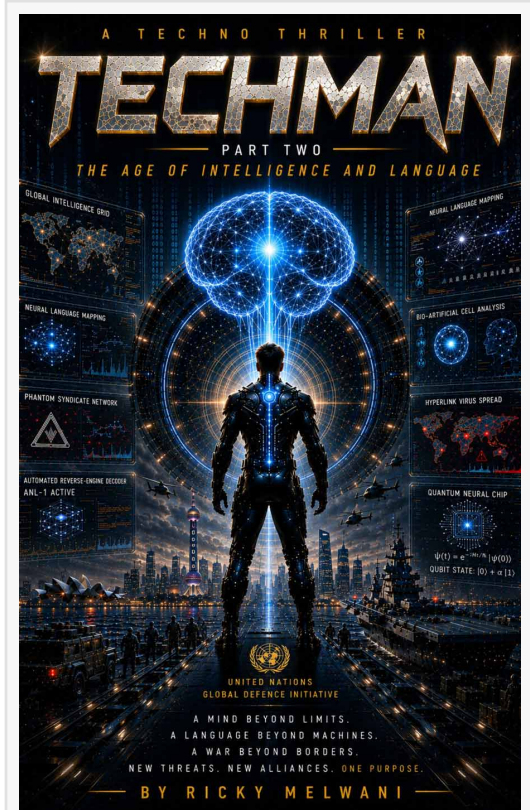

When the technology inside his head provides no answer, Aaron develops a new approach to trace the patterns beneath the languages and investigate their possible source.

Arc 2: Dr. Robert and the Study of Human Emotion

Inside Dr. Robert's laboratory, Eidolon and Eidos move around living patients as bio-artificial cells search for disease at its earliest stages.

The readings reveal an unexpected layer within the human body.

The United Nations sends Dr. Robert a patient unlike any other: Thomas Ashworth, 68,

TECHMAN Part Two: The Age of Intelligence and Language — book cover

terminally ill and grieving his wife of 43 years. Ashworth asks Robert to preserve what a lifetime of loving one person left inside him and pass something of it to his daughter.

The storyline examines an experimental concept involving the transfer and preservation of human emotion.

Arc 3: Aaron's Team Investigates the Phantom Syndicate

For fourteen years, the Phantom Syndicate has been buying its way into the infrastructure of forty-seven nations while building something no agency has located.

Movements become locations. Surveillance becomes evidence.

As the investigation progresses beyond what can be uncovered through screens and surveillance, the team moves into a direct operation.

The investigation becomes a military operation.

Arc 4: The 25-Year Hunt

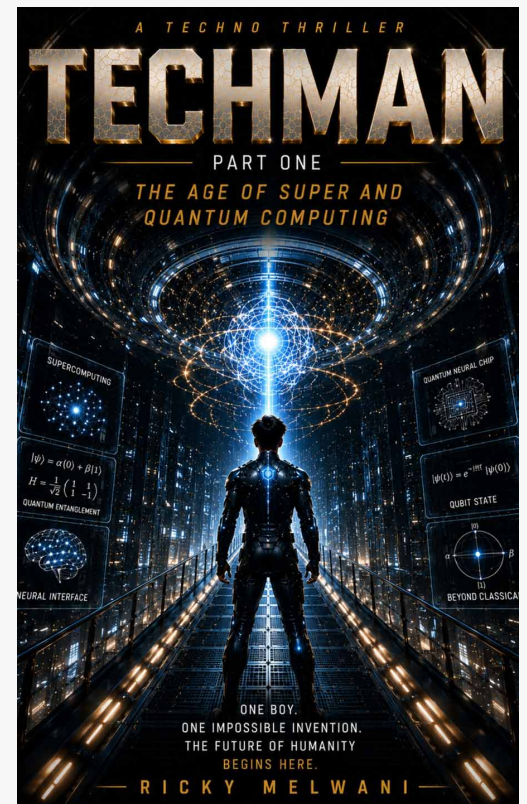

Elsewhere, another storyline follows a forty-five-day search involving three hunters and one destination. What they are searching for has been hidden for twenty-five years, and its discovery could have significant consequences for Aaron's father and what he has spent his life protecting.

TECHMAN Part One: Age of Super & Quantum Computing

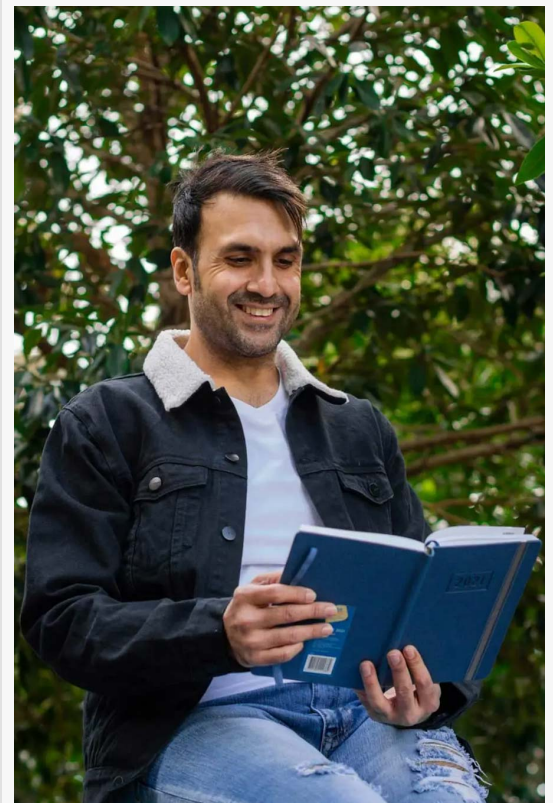

Aaron's story begins at eight years old. A catastrophic accident leaves his father with one option: an experimental brain chip designed to save his son's life. Aaron survives, but the technology eventually forces his family to leave India and begin again under new identities in Australia.

Part One follows the consequences of that technology through a series of incidents involving advanced computing and emerging threats.

In one storyline, a train traveling at 130 km/h loses its brakes while twenty meters of track are missing.

Australia's railway network turns against itself. Aaron saves his tutor's train before the virus mutates and threatens another train carrying his mother.

Another chapter moves through 1917, 1944 and 4271 BCE as a military simulator shifts from World War I to Omaha Beach and then to an alien battlefield featuring a language nobody programmed. Aaron responds to the language rather than translating it.

Elsewhere, Aaron's suit is designed to defeat cameras, infrared and radar. The building detects him through heat, heartbeat, breathing and moving air, then adapts to his movements.

Part One also introduces Dr. Robert's development of Eidolon and Eidos, the machines that progress to human trials in Part Two.

ABOUT THE TECHMAN SERIES

The TECHMAN Series is a continuing science-fiction and techno-thriller universe exploring brain-chip technology, advanced computing, robotics, medicine, and intelligence operations. Learn more: <https://techmanseries.com>

ABOUT THE AUTHOR

Ricky Melwani is an Australian author and the creator of the TECHMAN series, a continuing science-fiction and techno-thriller universe about the consequences of technology moving beyond the limits humanity originally intended for it.

Through TECHMAN, Ricky combines large-scale technological ideas with human stories involving family, identity, memory, responsibility and the choices people make when extraordinary technology becomes part of everyday life. Here is a recent article published [about the author and his books](#).
