

Artificio Expands AI-Powered SAP Business Process Automation for Midsize and Large Enterprises

Unified platform automates finance, sales, quality, maintenance, production, logistics, and shop-floor processes across SAP ECC and SAP S/4HANA environments

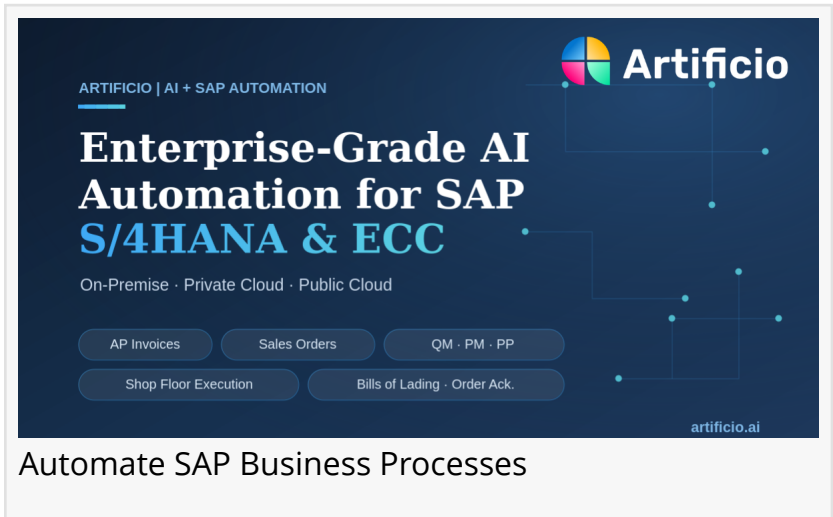

IRVINE, CA, UNITED STATES, September 2, 2026 /EINPresswire.com/ -- Artificio Products Inc. today announced an expanded portfolio of AI-powered business process automation capabilities for midsize and large organizations running SAP ECC and SAP S/4HANA, including enterprises

using SAP Business Technology Platform (SAP BTP) as an integration and extension layer. The platform helps enterprises automate document- and data-driven processes across finance, sales, quality, maintenance, production planning, logistics, and shop-floor operations.

Artificio helps mid and large enterprises automate complex SAP processes by validating data against live SAP records and uniting AI, workflows, approvals, and transactions on one platform"

*Lal Singh, Founder and CEO
of Artificio*

Artificio combines [SAP intelligent document processing](#), SAP data validation, workflow orchestration, human approvals, exception handling, and transaction posting within a unified platform. It is designed for complex SAP environments with high transaction volumes, multiple business entities, rigorous governance requirements, and a mix of on-premises and cloud systems. Using SAP-supported integration methods appropriate to each customer landscape, Artificio connects with SAP through interfaces such as APIs, OData services, IDocs, BAPIs, and RFC-enabled services. For customers using SAP BTP, Artificio can support BTP-based integration and

extension patterns alongside direct SAP interfaces. This enables organizations to automate business processes while retaining their existing SAP investments and security model.

Beyond Document Capture: End-to-End [SAP Process Automation](#) :

Artificio is designed to automate complete business processes rather than stop after extracting information from a document. The platform can validate incoming information against live SAP data, apply business rules, route exceptions to the appropriate people, and create clean transactions in SAP.

Any SAP business document automatically processed by Artificio

- Accounts payable invoice automation: Captures supplier invoices, validates invoice data against purchase orders and goods receipts, manages exceptions and approvals, and posts approved transactions into SAP.
- Sales order automation: Converts customer purchase orders received through email, PDF, or structured channels into validated SAP sales orders, reducing manual entry and order-processing errors.
- Quality Management results recording: Captures inspection and test results and records validated data in SAP QM, supporting more consistent quality execution and audit readiness.
- Plant Maintenance and calibration reporting: Digitizes maintenance and calibration documentation and connects approved results with the corresponding SAP PM processes and records.
- Production Planning and shop-floor execution: Supports production workflows and provides a mobile-ready operator check-in and check-out experience for orders and operations. Labor time and production confirmations can be captured at the point of work and transmitted to SAP.
- Logistics document processing: Automates bills of lading, order acknowledgments, and other operational documents and connects them with the appropriate SAP transactions and workflows.

By providing these capabilities on one platform, Artificio helps enterprises reduce dependence on disconnected point solutions, duplicated integrations, and manual handoffs. IT and business teams gain a consistent framework for governance, exception management, monitoring, and continuous improvement across SAP processes.

Built for ECC, SAP S/4HANA, SAP BTP, and Hybrid Landscapes :

Many enterprises operate SAP ECC and SAP S/4HANA in parallel across business units, plants, and geographies. Artificio supports phased modernization by allowing organizations to introduce automation around their current SAP landscape and adapt integration patterns as systems move toward SAP S/4HANA.

Deployment and integration are aligned with each organization's architecture, security requirements, and SAP release. Organizations can use SAP BTP as an integration and extension

layer where it fits their landscape strategy, while other customers can connect through supported direct interfaces. This approach supports on-premises, private-cloud, public-cloud, and hybrid environments without forcing every customer into the same technical model.

“Midsize and large SAP organizations do not need another isolated document-capture tool. They need [automation solution](#) that can understand incoming business information, validate it against live SAP data, coordinate approvals and exceptions, and create accurate transactions in SAP,” said Lal Singh, Founder and CEO of Artificio Products Inc. “Artificio brings those capabilities together across finance, sales, quality, maintenance, production, and logistics.”

Enterprise Governance and Operational Value :

Artificio is built for business processes where accuracy, traceability, and controlled exception handling are as important as speed. The platform helps organizations maintain an auditable connection between source documents, workflow decisions, validations, approvals, and the resulting SAP transactions.

By reducing repetitive data entry and accelerating the flow of validated information into SAP, organizations can improve processing consistency, shorten cycle times, and give finance and operations teams more timely data. For regulated and asset-intensive industries, digital results recording and calibration workflows can also strengthen process traceability and audit preparation.

SAP Experience and Partner-Led Delivery

Artificio is built by a team with more than two decades of SAP implementation and manufacturing technology experience. The company also works with SAP consulting firms, systems integrators, and implementation partners to combine Artificio's AI and workflow capabilities with SAP functional, technical, and industry expertise.

Availability

Artificio's enterprise SAP automation capabilities are available today for qualified organizations running SAP ECC and SAP S/4HANA, including landscapes that use SAP BTP.

Companies can request a demonstration and discuss their SAP landscape, process requirements, and deployment approach at <https://artificio.ai/contact-us>.

About Artificio Products Inc.

Artificio Products Inc. is an AI-powered business process automation company headquartered in Irvine, California. Founded in 2020, Artificio helps midsize and large enterprises automate document- and data-driven processes across SAP ECC, SAP S/4HANA, and SAP BTP-enabled landscapes. Its platform combines intelligent document processing, workflow orchestration, SAP data validation, exception handling, approvals, and transaction posting.
