

Docsie Launches AI Content Comparison for Documents, Videos and Knowledge Bases

Docsie turns documents, videos and knowledge bases into structured, evidence-backed comparisons for audits, coverage gaps and change analysis.

AUSTIN, TX, UNITED STATES, August 30, 2026 /EINPresswire.com/ -- Docsie today announced the expanded availability of Docsie Content Comparison, an AI-powered comparison system designed to help teams analyze large volumes of documentation, video, and knowledge content without manually reviewing every source side by side.

Compare Documents with AI

Unlike traditional document-diff tools that primarily highlight text changes, Docsie Content Comparison lets users define what they actually want to understand.

“

“Comparing two five-page files is easy. The problem changes completely when you are dealing with hundreds of pages, multiple product versions, large knowledge bases or hours of video,” ”

Philippe Trounev

Teams can ask questions such as:

What changed between two versions of this documentation?

What information is present in one product guide but missing from another?

Does this documentation meet a defined quality, policy, or compliance standard?

Where does one product or knowledge base provide

stronger coverage than another?

Does generated documentation accurately reflect the original source material?

What changed between two training or instructional videos?

Docsie then analyzes the selected sources and produces a structured set of findings that includes severity, verdicts, delta summaries, and evidence linked directly back to the original

source material.

“Comparing two files is easy when they are five pages long,” said Philippe Trounev, CEO of Docsie. “The problem becomes very different when you have hundreds of pages of documentation, multiple product versions, several knowledge bases, or hours of video. At that point, the work is not finding textual differences. It is understanding which differences actually matter. That is what we built Content Comparison to do.”

From document diffing to evidence-backed analysis

Docsie Content Comparison supports books, chapters, PDFs, pasted text, video, documentation repositories, and content stored across different Docsie workspaces.

Users can choose the goal of the comparison and configure specific dimensions such as documentation quality, coverage gaps, strengths and weaknesses, API differences, revision changes, consistency, or custom evaluation criteria.

The system can then run anything from a quick comparison to a deeper structured audit.

Instead of returning a single AI-generated summary, Docsie produces individual findings that can be reviewed independently.

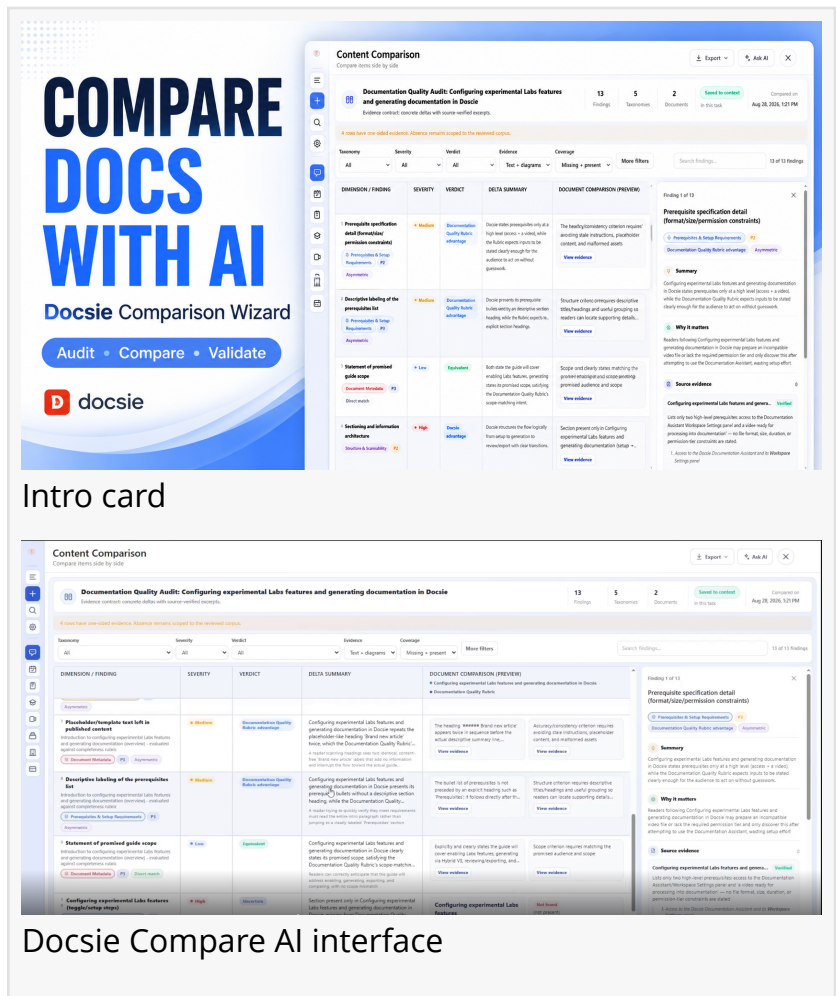

Each finding includes the issue or difference identified, its severity, a verdict, an explanation of the delta, and source evidence from both sides of the comparison.

This allows reviewers to verify the analysis rather than relying on an opaque AI conclusion.

Designed for documentation, product and compliance teams

Potential applications include:

Documentation quality audits. Compare technical documentation against an internal quality

rubric or documentation standard and identify gaps that require attention.

Version and change analysis. Understand substantive differences between documentation releases rather than manually reviewing every revision.

Product coverage comparison. Compare documentation for two products, integrations, or platforms and identify where one provides information the other does not.

Compliance and policy review. Evaluate documentation against specifications, policies, requirements, or other reference material.

Video comparison. Analyze two instructional, training, or product videos to identify changes, missing steps, or differences in coverage.

Source validation. Compare AI-generated or newly created documentation with its original source material to identify omissions, inconsistencies, or unsupported claims.

Results can be filtered by taxonomy, severity, verdict, evidence type, and coverage. Findings can also be exported to Excel for further analysis, reporting, or integration into external review workflows.

New video walkthroughs demonstrate the workflow

Docsie has also released a complete product walkthrough and a one-minute overview demonstrating how Content Comparison works in practice, including documentation-quality audits, coverage comparison, differences analysis, evidence review, filtering, and export.
