

The Team Behind MileageWise Marks 25 Years in Mileage-Log Software

Beginning with RoadRecord in 2001, the MileageWise team has evolved from Windows-based software to connected mobile and web solutions for business drivers.

SARASOTA, FL, UNITED STATES, August 31, 2026 /EINPresswire.com/ -- The team behind [MileageWise](https://www.mileagewise.com) is celebrating 25 years of developing mileage-log solutions. Its work began with RoadRecord in 2001, when mileage logging was primarily a desktop-based administrative task.

Since then, the team has adapted its products through several generations of technology. Today, MileageWise helps drivers record current trips and prepare mileage logs for past periods using available travel data: a combination shaped by decades of solving real customer problems.

1. Origins: From Windows Software to Mobile and Web Solutions

When the team entered the field in 2001, mileage-tracking apps did not yet exist. RoadRecord was built to address a practical need: helping business drivers organize their mileage records more efficiently.

As technology and user habits changed, the product changed with them. By 2013, the team had developed mobile apps for Android, iOS, and Windows Phone. A web-based online dashboard followed in 2018, giving users a more flexible way to review, edit, and finalize their mileage logs.

In 2020, the team brought its experience to the U.S. market through MileageWise. By 2025, it had also brought its [Google Maps Timeline](#) -based mileage-log solution to mobile devices.

“We started solving mileage-log problems in 2001.” said Akos Barazsy, founder and CEO of MileageWise. “The technology has changed repeatedly over the past 25 years, but our purpose is the same: make mileage documentation more manageable for drivers.”

2. A Discovery: The Gap in Ongoing Mileage Tracking

Working with drivers over many years revealed a problem that ongoing mileage tracking alone could not solve. People often postpone documenting their business drives until tax season, an audit, a reimbursement deadline, or a request from their accountant makes those records urgent.

Installing a [mileage tracker](#) can help from that day forward, but it cannot account for the months or years that have already passed. The team therefore began exploring how existing travel data could help drivers catch up.

3. The Solution: Turning Past Travel Data Into Mileage Logs

This led to MileageWise’s Google Timeline import workflow. The solution helps users identify car trips within their location history, organize their drives, and complete the remaining steps needed to prepare a mileage log.

“Many people come to us because the trips have already happened and they need help making sense of the information they still have,” Barazsy said. “Tracking is important, but rescue is just as important.”

For customers who believe their mileage records may be lost, finding a practical way forward can provide more than administrative convenience. It can bring relief during an otherwise stressful situation.

with the Mobile App
and seamless management
on the Web Dashboard.**

MileageWise's mileage tracker app and desktop dashboard combo has been around since 2020.

As the team behind MileageWise enters its next chapter, it remains focused on simplifying mileage documentation, whether drivers begin tracking on time or need help catching up later.

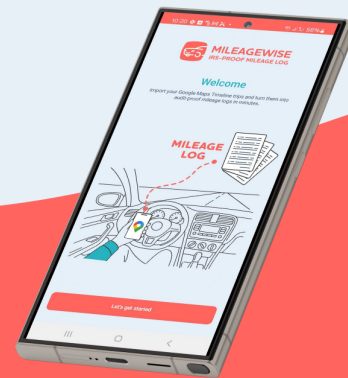

About MileageWise

MileageWise provides mobile and web-based tools for ongoing mileage tracking and retroactive mileage-log preparation. Its solutions help drivers record, review, categorize, and organize business mileage for tax and reimbursement purposes.
