

Cardinal Custom Construction Reports Shift in New Home and Remodeling Trends

Cardinal Custom Construction is a construction company serving communities in Santa Clara and San Mateo Counties.

PALO ALTO, CA, UNITED STATES, September 1, 2026 /EINPresswire.com/ -- Cardinal Custom Construction is highlighting the range of residential and commercial construction services available to property owners across Santa Clara and San Mateo Counties. The company's service portfolio includes new single-family home construction, major [home remodeling](#) and additions, [basement construction](#), multi-unit residential projects, accessory dwelling units (ADUs), commercial construction, and construction management.

The company also provides construction planning, engineering, geotechnical evaluation, and Title 24 services as part of full permit submittal packages for qualifying construction projects. Its current service structure reflects the range of work involved in developing new properties and updating existing spaces.

New Home Construction Includes Design and Engineering Services

New single-family home construction is one of the company's primary residential services. The service includes construction planning, structural engineering, Title 24 services, and geotechnical

basement construction

Home additions

evaluation for permit preparation and issuance. The company states that its new home construction work can accommodate a range of home styles, including Craftsman, Mediterranean, Mid-Century Modern, and modern homes. The service is structured to cover the project from early planning through construction.

For journalists examining changes in residential construction, the combination of design, engineering, permitting, and construction provides a relevant example of how new-home projects can involve multiple stages before physical construction begins.

Remodeling and [Home Additions](#)

Expand Existing Living Space

Major home remodeling and additions form another part of the company's residential services. Projects can include home additions, bump-outs, in-law suites, and other changes designed to alter or expand existing residential space. Home additions can take several forms, depending on the property and project scope. The company lists bedroom, bathroom, and kitchen additions, bump-outs and extensions, second-story additions, two-story additions, and in-law unit additions among its services.

These projects can involve both design considerations and structural work. As a result, remodeling and additions may require planning that accounts for the existing building, proposed changes, applicable regulations, and the desired use of the finished space.

Basement Construction Covers New and Retrofit Projects

Basement construction is also included in the company's residential services. Projects may involve constructing a new basement as part of a home or retrofitting an existing structure. The company's website states that it uses SPEEDBLOCK in basement construction and identifies the product as a method intended to reduce construction time. The company also lists basement repair and remodeling among its broader basement-related services.

Basement projects can require careful consideration of structural conditions, waterproofing, insulation, and other building elements. The scope can vary based on whether the work involves new construction or modification of an existing property.

Multi-Unit and ADU Construction

Beyond single-family homes, the company provides multi-unit residential construction and ADU construction. These services address projects involving more than a traditional single-family residence or the addition of a separate residential unit. ADU projects can involve planning, design, permitting, engineering, and construction requirements. Multi-unit projects may also involve broader coordination across several building components.

The inclusion of these services gives the company a construction portfolio covering several residential property types rather than focusing solely on new single-family homes.

Commercial Construction and Construction Management

Commercial construction is another service area listed by the company. Its commercial project services include work involving commercial spaces, multi-family housing, tenant improvements, and office space. Construction management services are available for residential and commercial projects. The company describes project management as part of its approach to coordinating work from beginning to completion.

The company also states that projects are assigned one or two project managers and that weekly meetings and additional virtual meetings can be used for project communication. These practices are presented as part of the company's project coordination process.

About Cardinal Custom Construction

Cardinal Custom Construction is a construction company serving communities in Santa Clara and San Mateo Counties. Its listed services include new single-family construction, major home remodeling and additions, multi-unit residential construction, basement construction, ADU construction, commercial construction, and construction management.

The company also provides construction planning, engineering, geotechnical evaluation, and Title 24 services related to permit submittals. Its service area includes communities such as Palo Alto, Menlo Park, Redwood City, Los Altos, Los Gatos, Saratoga, Atherton, and Half Moon Bay.
