

SuperSonic POS Ranks No. 1,090 on the 2026 Inc. 5000

Tampa-based retail technology company ranks No. 1,090 after achieving 321% three-year revenue growth.

TAMPA, FL, UNITED STATES, August 31, 2026 /EINPresswire.com/ -- [SuperSonic POS](#), the Operating System for Neighborhood Retail, has been named to the 2026 Inc. 5000, ranking No. 1,090 after achieving 321% three-year revenue growth. The Tampa-based company builds an AI-native operating platform for independent retailers, spanning point of sale, back-office operations, inventory, automation, and customer engagement.

Tampa-based retail technology company, SuperSonic POS, ranks No. 1,090 after achieving 321% three-year revenue growth.

The Inc. 5000 ranks privately held U.S. companies by percentage revenue growth over a three-year period. SuperSonic's placement reflects the company's expansion as independent and multi-location retailers adopt more of its connected technology.

"My father's store held its own against major retailers on the same block. We built SuperSonic so every neighborhood retailer can have that same fighting chance - the technology to take on the big guys and win without losing what makes them local," said Mahdi Hussein, CEO of SuperSonic POS.

SuperSonic is an AI-native operating platform built to run the entire store. Its connected ecosystem brings together point of sale, SuperSonic Pay, SuperSonic Cloud back-office management, payroll, built-in loyalty and customer engagement, EDI and inventory management, e-commerce and delivery integrations, analytics, and purpose-built hardware. AI-powered invoice reading converts vendor invoices into structured inventory data, while SuperSonic's product vision extends the platform through specialized AI agents designed to automate more of the repetitive work required to run a store.

SuperSonic also takes an end-to-end approach to shrink, spanning both the front and back of house. Its custom loss-prevention analytics (LPA) engine connects register activity, inventory movement, employee behavior, and camera intelligence to surface risk patterns that disconnected POS, inventory, and surveillance tools can miss.

Built for complex retail, SuperSonic serves convenience stores, grocers, liquor stores, supermarkets, fuel retailers, and foodservice operations. Founded in 2018 by former store owners Mahdi Hussein and his father, Mohammad Hussein, the company gives independent operators the depth of an enterprise platform without forcing them to stitch together separate systems or sacrifice what makes their businesses local.

“This recognition belongs to our team, our partners, and the merchants who trust SuperSonic to help run their businesses,” Hussein said. “We’re proud of how far we’ve come, but even more excited about building the intelligent operating system neighborhood retailers will need for the next decade.”
