

YouthCenter Launches SafeGuard, a Handheld System for Rounds, Movement Tracking, and Medications in Juvenile Facilities

SafeGuard pairs a rugged handheld with RFID tracking so detention staff can log rounds, movements, medications, and meals in real time, synced to YouthCenter.

ALLENDALE, MI, UNITED STATES, September 1, 2026 /EINPresswire.com/ -- [BizStream](https://www.bizstream.com), the developer of YouthCenter, the cloud-based juvenile case management platform used nationwide, today announced the launch of YouthCenter SafeGuard, a handheld system that brings rounds, room checks, youth movement tracking, medication distribution, and daily facility documentation onto a single rugged device. Every action is time-stamped, linked to the staff member who performed it, and logged automatically in YouthCenter, creating a complete, auditable record of facility operations.

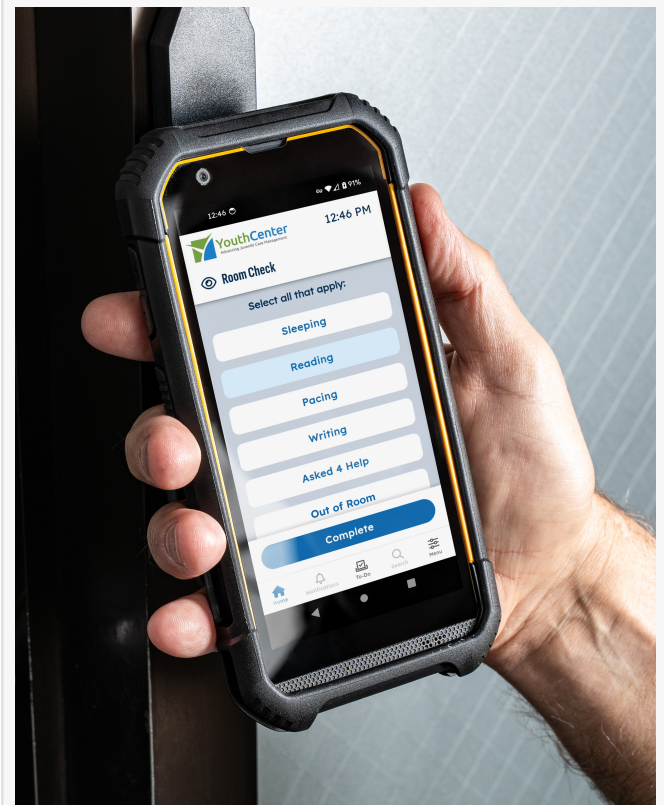

Rounds and Room Checks, Documented Where They Happen

Staff complete and document rounds, room checks, and observations directly on the device. RFID wall tags verify the staff member is physically at the location, on-device reminders flag upcoming and overdue checks, and supervisors get clear reporting on completed tasks and overall compliance.

Real-Time Movement Tracking with Separation Alerts

SafeGuard tracks individual and group movement throughout the facility and updates each youth's location in YouthCenter in real time. Built-in safeguards notify staff when a movement may conflict with required juvenile separations, and movement history supports transparency during audits and incident reviews.

Safer Medication Distribution

YouthCenter SafeGuard

Optional wristband scanning confirms the right youth before each dose. Staff can view medication schedules on the device, log distributions as they happen, and capture both staff and youth signatures, with every entry synced automatically to the youth's record.

Built for the Facility Floor

The SafeGuard device is rugged, drop-protected, and designed for shift work, with hot-swappable batteries so it never has to leave the floor to charge. Staff also use it for meal tracking, behavior management points, and time-stamped facility notes.

"SafeGuard replaces paper logs and clipboard rounds with verified, time-stamped records that flow straight into the youth's case file," said Dave Valko, Product Owner at BizStream. "That is the difference between saying a check happened and being able to prove it."

SafeGuard is available now to juvenile detention and residential facilities. Agencies can schedule a demonstration at www.youthcenter.net/youthcenter-safeguard or call 877.692.4978.
