

Introducing Anker MindBase™, an AI-Powered Home Hub Built for the Autonomous Home, at IFA 2026

The home's central brain brings together whole-home connectivity, local storage and on-device computing

BELLEVUE, WA, UNITED STATES, September 3, 2026 /EINPresswire.com/ -- Anker Innovations, today announced the unveiling of Anker MindBase™, a local AI home hub built for the autonomous home. It functions as the central brain for the home, bringing together three core capabilities —

whole-home connectivity, local intelligence and memory — all in a single system. MindBase connects the company's security, energy, cleaning and audio ecosystems into a locally run home intelligence network, keeping data local and private. As the first real-life application, the Anker

MindBase™ Security Kit ushers in a new era of proactive home security. The announcement was made at IFA 2026 in Berlin, Germany.

“

We believe the autonomous home needs three things: connection, local intelligence and memory that stays in the home under the family's control. MindBase brings those together in one system.”

Steven Yang, CEO of Anker Innovations

"We believe the autonomous home needs three things: connection, local intelligence and memory that stays in the home under the family's control. MindBase brings those together in one system and gives the home a true brain of its own that can understand what is happening across the home, make decisions locally, and coordinate the devices inside it," said Steven Yang, CEO of Anker Innovations.

Connect with Anker EasyOmni™ Link

Anker MindBase product image

Anker EasyOmni™ Link is a software system that brings the Anker ecosystem and compatible third-party smart home devices into a central local intelligence system, supporting close to 100 Anker devices and hundreds of Matter-compatible products. Anker devices can be added with a

single tap, while Matter compatibility integrates products from other brands into one network, working alongside Apple HomeKit, [Amazon](#) Alexa, Google Assistant and Home Assistant. For current HomeBase S380 users, existing footage can be transferred smoothly to the MindBase hub.

Compute with Anker TrueSmart™ Agent

At the center is Anker TrueSmart™ Agent, an on-device AI engine powered by the built-in AI Core compute card. The AI chip has a powerful large language model developed in-house with 26 TOPS computing power, enabling AI agents to perceive, plan and act locally. The agent architecture is designed to expand over time, with the Network-Attached Storage (NAS) Agent and Security Agent launching first.

Store with Anker EverSafe™ Memory

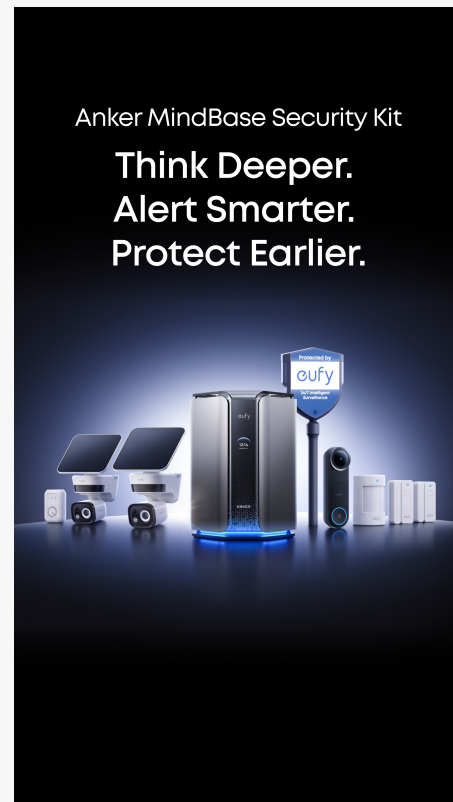

Anker EverSafe™ Memory gives families a private, expandable storage layer within their own home. It consolidates photos, recordings, files and device data into a local hub that supports 48 terabytes of expandable local storage, functioning as a NAS. With locally processed data and storage, EverSafe™ Memory supports filtering through footage using natural-language search, curating security highlight reels, organizing files, photo and video analysis, without sending personal data to the cloud.

A New Era of Proactive AI Home Security

The first product powered by MindBase is the Anker MindBase™ Security Kit, marking a strategic shift to a unified home security platform. The kit combines MindBase with the upcoming Anker eufy TrackLight™ Cam S1 — a revolutionary active deterrence camera with auto-tracking light, combining 180-degree dual-radar detection with 4K resolution to deter intruders, in addition to the Video Doorbell S4, Smart Security Shield, entry and motion sensors. Details on launch and

pricing will be announced at a later stage.

Running entirely on-device, MindBase's first security-focused AI agent evaluates events in real-time to assess risk and respond through observation, lighting, verbal warnings or active deterrence, creating multiple layers of protection across the home. The Smart Security Shield is a sensor placed at the edge of the yard, using 180-degree dual radar to detect strangers from up to 15 meters away, while its DSKey digital credential allows MindBase to recognize family members from up to 30 meters away.

Looking ahead, more Agents powered by MindBase will be launched, such as an Energy Agent for your home's power, a Clean Agent for cleaning, smart appliances, and beyond.

Expanded IFA Portfolio Rounds Out Home Security Lineup

Shown at IFA, the eufy Video Doorbell S4 is the refreshed dual-purpose wired video doorbell and security camera, offering a 180-degree panoramic field of view that eliminates blind spots. eufy OmniTrack™'s AI-powered human-detection technology accurately tracks and keeps couriers and visitors in frame. A 9-megapixel lens and 3K resolution deliver sharp video with color night vision. It is compatible with Alexa, Google Assistant and eufy HomeBase S380.

Available now, the eufy NVR Security System E50 pairs an 8-channel network video recorder with four hybrid bullet pan-tilt-zoom dual-lens cameras, combining a fixed 2K resolution wide-angle bullet lens with a motorized 4K resolution PTZ lens on a single mount. An ethernet cable delivers power and data, with the channel count expandable to 16. OmniTrack™ auto framing, cross-camera tracking, AI-powered smart video search, all enable 24/7 continuous recording. A pre-installed hard drive is available and expandable to 16TB.

The Anker eufy Window Camera E10 brings outdoor monitoring to apartments and rentals with a mounting sticker for the inside of a window. A 25-degree adjustable tilt combined with anti-reflection optics eliminates window reflection and glare. Recording in 2.5K resolution, the camera has on-device AI detection identifying people and sounds.

The Anker eufy Fall Detection Sensor provides non-wearable emergency detection for seniors. Mounted in the bathroom and bedroom, it accurately detects falls using millimeter-wave radar sensing and supports two-way communication.

Built on eufy's local-first data storage commitment, the portfolio processes sensitive biometric data on-device, reinforcing user privacy with no monthly subscriptions attached*, ensuring peace of mind for homeowners.

Pricing and Availability

- NVR Security System E50: Available now in U.S., Canada, Australia on eufy.com and Amazon.

- 4-camera kit - MSRP: \$999; \$1,199 (with 2TB hard drive)
- 8-camera kit - MSRP: \$1,599; \$1,899 (with 4TB hard drive)
- Video Doorbell S4 - MSRP: \$299.99 with Chime. Available in late September in the U.S., U.K., Canada, Middle East, Africa, select European markets.
- Window Camera E10 - MSRP: \$69.99. Available later this year in the U.S., U.K., Japan, Canada, Australia, New Zealand and select European markets.
