

Conphere Launches with AI Agents Built to Transform Modern Events

AI-native event platform introduces autonomous agents, intelligent networking, next-generation ticketing, memberships, and expanded event automation

SAN DIEGO, CA, UNITED STATES,
September 1, 2026 /EINPresswire.com/

-- [Conphere](#), the human-centric event and conference management platform built for the AI era, today announced the release of Conphere Platform 1.5 — its most ambitious update yet and the first to bring its full suite of AI agents to organizers, along with a redesigned ticketing experience and a new membership model for attendees.

“

With Conphere 1.5, we're putting AI to work behind the scenes so organizers can spend less time managing tasks and more time building communities and creating exceptional event experiences.”

*Faisal Mushtaq, Founder &
CEO at Conphere*

While legacy event platforms bolt AI features onto rigid, transaction-first systems, Conphere was built from the ground up on a simple premise: technology should make human connection easier, not harder — and it should handle the busywork so people don't have to. This Conphere release marks an important step toward the company's broader vision of building an AI-native operating platform for events—one that connects event data, people, workflows, communications, and intelligence while reducing the repetitive work traditionally required to run conferences and events.

“Events are fundamentally about human connection, yet organizers spend an extraordinary amount of time on repetitive operational work,” said Faisal Mushtaq, Founder & CEO at Conphere. “With Conphere 1.5, we're putting AI to work behind the scenes so organizers can spend less time managing tasks and more time building communities and creating exceptional event experiences.”

AI Agents Come to Event Management

At the center of Conphere 1.5 is the new AI multi-agent framework, the first of its kind in the

industry.

Using event data—including speakers, sessions, sponsors, exhibitors, and more—the agent can generate platform-specific social content and branded event collateral, schedule publication, automate various operational tasks, and help organizers track performance. Unlike traditional AI writing tools that respond to individual prompts, Conphere's approach centers on agents that understand an event's context and can increasingly execute workflows on behalf of organizers.

Smarter Networking and Stronger Communities

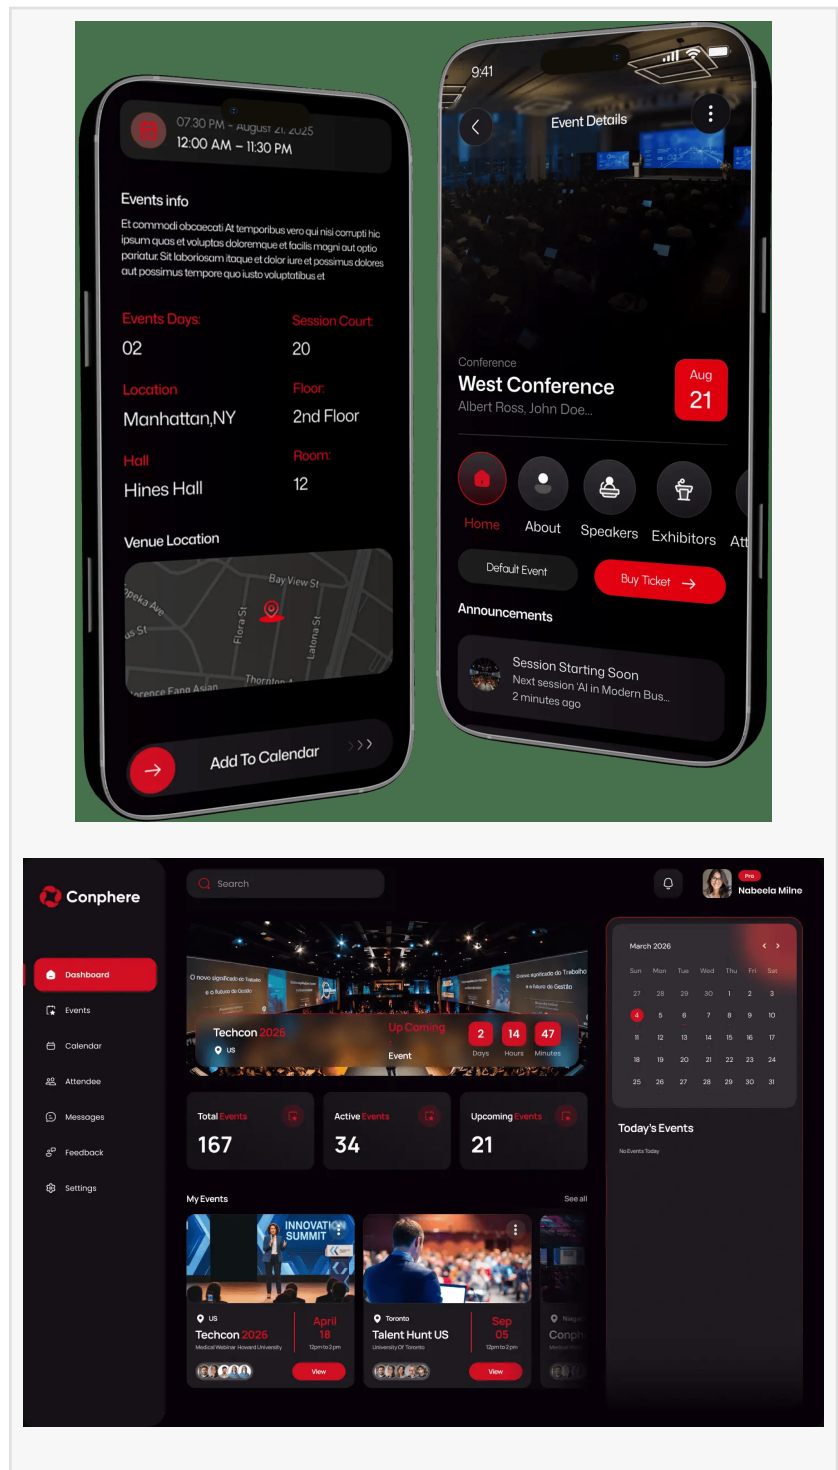

Conphere 1.5 also introduces an AI Networking Engine designed to help attendees discover relevant people based on profiles, interests, and event context, while supporting introductions, meetings, and follow-up. A new membership platform enables organizers to offer individual and corporate memberships across multiple events, helping conference organizations extend engagement beyond a single event and build year-round communities.

Next-Generation Ticketing and Event Operations

The release includes a rearchitected ticketing platform with multiple ticket types and real-time revenue analytics, along with enhancements across check-in, attendee communications, access control, badging, and engagement.

Building an AI Workforce for Event Organizers

The Social Media Agent is the first of a broader family of specialized Conphere AI agents. Additional agents focused on sponsor and exhibitor growth, attendee support, speaker and agenda operations, event logistics, and executive analytics are in development. Together, these capabilities are designed to move event technology beyond individual productivity tools to an AI-

native operations layer that supports the entire event lifecycle.

“Our long-term vision is not simply to add AI features to event software,” added Faisal Mushtaq. “We are building an intelligent operating platform where AI agents can work alongside event teams across marketing, operations, networking, revenue, and analytics—while keeping people and human connection at the center.”

Availability

Conphere 1.5 is available now to new and existing Conphere customers.
