

Red Sift extends MISA membership with OnDMARC Integration for Microsoft Sentinel

Microsoft customers worldwide can now discover and deploy the Red Sift OnDMARC Integration for Microsoft Sentinel through Microsoft Marketplace.

LONDON, UNITED KINGDOM, September 1, 2026 /EINPresswire.com/ -- Red Sift, the company making the internet fundamentally safer, today announced the availability of the [Red Sift OnDMARC](#) Integration for Microsoft Sentinel in [Microsoft Marketplace](#), the unified online destination for

customers to buy trusted cloud solutions, AI apps, and agents to meet their business needs. Red Sift customers can now discover and deploy trusted solutions through Microsoft Marketplace, with smooth integration and streamlined management across Microsoft Azure and other Microsoft products.

Phishing was the initial access vector in 16% of breaches, according to the [Verizon 2026 Data Breach Investigations Report](#). Among AI-assisted intrusions, that figure rose to 44%. Email authentication failures are one of the earliest signals that phishing or spoofing attempts are underway, but that evidence has typically lived outside the security operations center (SOC). Red Sift OnDMARC's integration for Microsoft Sentinel streams Domain-based Message Authentication, Reporting and Conformance (DMARC) forensic data and email authentication events directly into Microsoft Sentinel as events occur. Security operations teams can prioritize email threats in the same system where they run their investigations.

"Email is where most attacks start, but the evidence usually sits in a different tool than the one your SOC team lives in," said Rahul Powar, Co-founder and CEO at Red Sift. "This integration puts our OnDMARC forensic data and audit logs directly into Microsoft Sentinel, so analysts can correlate email authentication activity with everything else they're already watching, without switching screens."

"Microsoft Marketplace helps organizations and partners move faster, work smarter, and grow

by connecting them with the right solutions—all in one trusted place," said Cyril Belikoff, Vice President, Microsoft Azure Product Marketing. "We're happy to welcome Red Sift's solution to the growing Microsoft Marketplace ecosystem."

Red Sift helps organizations deploy security across email, web, and PKI, and is trusted by more than 1,200 teams worldwide. Red Sift OnDMARC is its email authentication application, which helps organizations quickly reach DMARC enforcement. This integration extends Red Sift's standing as an official member of the Microsoft Intelligent Security Association (MISA). Under MISA, OnDMARC offers total phishing protection to Office 365 customers.

The latest integration connects Red Sift OnDMARC to Microsoft Sentinel, Microsoft's cloud-native Security Information and Event Management (SIEM) solution. Once enabled, OnDMARC forensic data, including SPF and DKIM results, is streamed into the Microsoft Sentinel workspace in real time without manual exports or polling required. Security teams can surface suspicious senders, domains, and login anomalies that could indicate phishing campaigns and Business Email Compromise (BEC) without moving between separate tools.

The integration is available to existing Red Sift OnDMARC customers. Customers can purchase Red Sift OnDMARC through the Microsoft Marketplace and apply the transaction to their Microsoft Azure Consumption Commitment (MACC).

Microsoft Marketplace is a single destination to find, try, and buy trusted cloud solutions, AI apps, and agents to meet your business objectives. Choose from a growing collection of solutions tailored to your unique needs, available both in Marketplace and directly within Microsoft products.

About Red Sift

Red Sift is a company making the internet fundamentally safer. Trusted by 1,200+ teams around the world, Red Sift makes it simple to deploy proactive security across email, web and PKI. Red Sift's cloud-based applications make it easy to embrace the protocols that keep the internet safe – like DMARC & TLS – while protecting known protocol gaps, stopping configuration drift and using AI to scale. Red Sift is the official DMARC provider for Cisco, a trusted partner for Microsoft, and is the recommended certificate monitoring service of Let's Encrypt. Backed by some of the best venture investors in the business. Learn more and get started for free at www.redsift.com.
