

# ChackTok Launches AI Photo Templates in iOS v2.1.8: 100+ Preset AI Looks for Live Events

*Preset AI looks bring automated image creation into ChackTok's live event workflow for photo booth operators.*

LONDON, UNITED KINGDOM, September 1, 2026 /EINPresswire.com/ -- ChackTok, the professional event imaging workflow platform for photo booths, 3D scanning systems, and robotic camera arms, today announced AI Photo Templates in its iOS v2.1.8 release. The feature lets operators attach preset AI looks to an event and automatically transform each guest photo after capture.

Shoot once. Let AI create the look.

AI Photo Templates moves AI image creation from a separate post-production task into the live event workflow:

- More than 100 preset templates are available in the ChackTok AI Template Library, organized into themed collections including Screen Worlds and Timeless Civilization. Launch looks include Golden Carpet Glamour, Urban Blast Hero, Western Look, and Future Hero.
- Operators can browse the library, select the looks they want, and apply them to an event. The selected templates then sync into the app's AI Photo section.
- Guests take photos through the normal event workflow. After capture, ChackTok automatically generates the result using the selected AI preset, with each generation consuming credits.
- New users receive 10 free AI credits when they log in.

To get started, an operator opens an event, finds Photo Templates, switches to AI Photo, and taps Add. After choosing and applying presets in the template library, the operator returns to the

app, saves the event, selects a look in Photo mode, and takes a test photo.

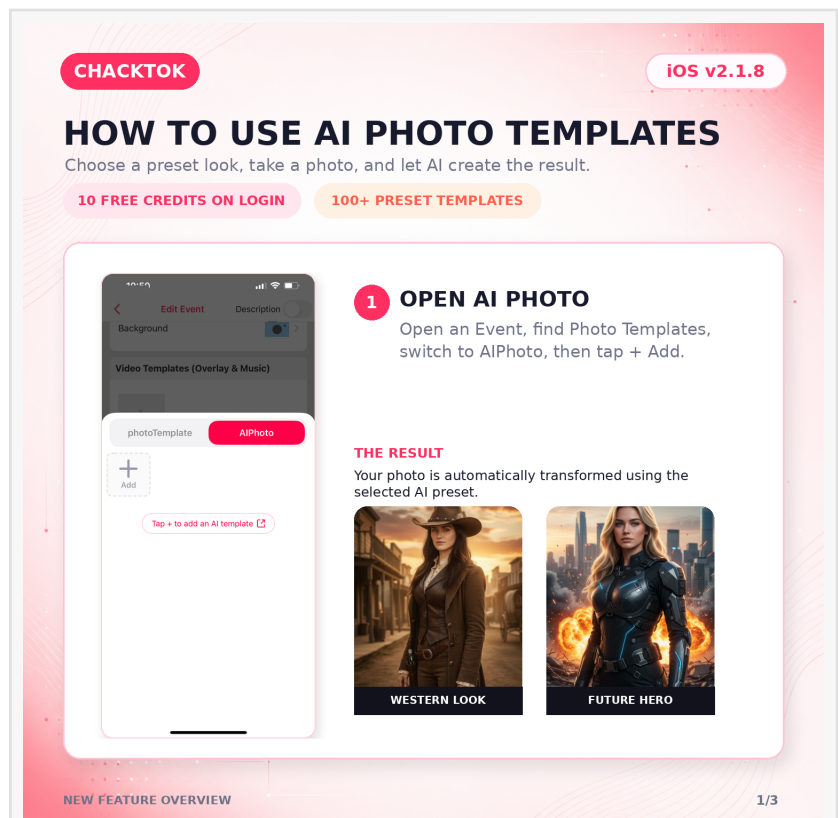

A practical AI option for commercial event operators

For rental operators and imaging studios, the preset library provides a way to package different visual themes for weddings, brand activations, and themed events without building a separate physical set for every look. Operators can select templates for each event and test the configured workflow before guests begin shooting.

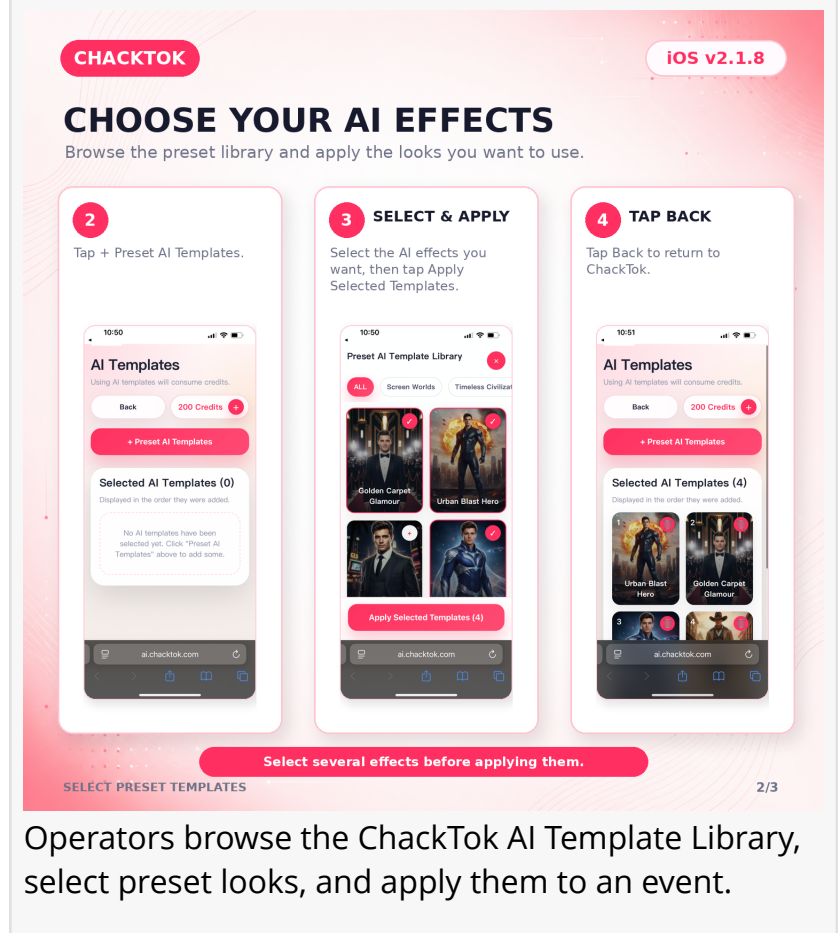

AI Photo Templates extends ChackTok's existing AI imaging capabilities, which include real-time AI background removal and replacement through AI Cutout, intelligent slow-motion smoothing, and high-frame-rate composition.

As of March 2026, ChackTok had more than 390,000 registered users and over 65,000 connected photo booth devices. The platform had supported more than 780,000 commercial events and processed over 13 million photos and videos worldwide. On an average day, more than 1,300 operators ran events on ChackTok and over 13,000 guests created content through the platform.

ChackTok is the default and recommended software platform across a range of interactive imaging hardware, including 360-degree photo booths, iPad photo booths, Magic Mirror booths, Glambot-style robotic camera arms, and full-body 3D

How operators open AI Photo Templates from an event and add preset AI looks in ChackTok.

Operators browse the ChackTok AI Template Library, select preset looks, and apply them to an event.

scanning systems. MWE (Make Win Easy), ChackTok's long-term hardware collaboration partner, provides photo booth and related interactive imaging hardware support. The brands collaborate during product design and delivery while remaining independent.

AI Photo Templates is available now in ChackTok for iOS v2.1.8. Operators can download [ChackTok on the App Store](#) and follow the [step-by-step AI Photo Templates guide](#). Additional product information is available on the [ChackTok website](#).

## About ChackTok

ChackTok is a professional event imaging workflow platform for photo booths, 3D scanning systems, robotic camera arms, and related interactive imaging equipment. It brings event setup, device control, AI image processing, and multi-channel digital sharing into one system.
