

Dr. Cinik Expands Doctor-Led Medical Team in Istanbul

Dr. Cinik expands its physician-led hair restoration team in Istanbul, strengthening medical oversight across consultation, surgery, and patient aftercare.

TX, UNITED STATES, September 2, 2026 /EINPresswire.com/ -- Istanbul Hair Restoration Clinic Expands Physician-Led Structure

[Dr. Cinik](#), a hair restoration and aesthetic medicine clinic in Istanbul, has expanded its doctor-led medical

team with the appointments of Dr. Eser Yalman and Dr. Servet Çolak. The appointments strengthen physician involvement in consultation, treatment planning, surgical procedures, and follow-up care.

The expansion comes as hair transplantation requires individualized assessment, surgical planning, and postoperative monitoring. Dr. Cinik's model places physicians at the center of medical decisions and treatment stages.

How Does a Doctor-Led Model Support Hair Transplantation?

Hair transplantation requires evaluation of hair loss, donor-area capacity, scalp characteristics, and hair loss patterns. A physician-led model places qualified doctors at the center of these clinical decisions.

Under Dr. Cinik's structure, physicians assess patients, determine treatment suitability, establish treatment plans, and oversee surgical stages. Medical staff assist with procedures according to established protocols and under physician supervision. This approach supports consistent clinical decision-making while allowing treatment plans to reflect individual differences in hair loss and donor supply. Physician involvement also continues through postoperative assessment and follow-up.

What Has Changed With the Medical Team Expansion?

The addition of Dr. Eser Yalman and Dr. Servet Çolak increases the number of physicians involved in the clinic's medical structure.

THOUSANDS OF HAPPY PATIENTS
AROUND THE WORLD

Excellence IS OUR STANDARD

Hair Transplant Turkey: Dr. Cinik

Dr. Yalman brings experience in general medicine, family medicine, occupational medicine, and medical aesthetics. Dr. Çolak contributes experience in hair transplantation, mesotherapy, regenerative treatments, FUE, and DHI procedures. Their combined backgrounds broaden the medical expertise available during patient care.

The clinic also maintains structured training for new team members. According to information provided by Dr. Cinik, newly appointed staff complete an extended training process before participating in patient procedures. The system supports consistency in clinical protocols as the team expands.

Who Is [Dr. Emrah Cinik](#)?

Dr. Emrah Cinik founded the Istanbul clinic in 2007 after studying medicine at Uludag University. He has more than two decades of professional experience in hair restoration and aesthetic medicine.

The clinic operates a 5,000-square-meter medical facility in Istanbul. According to clinic-reported figures, more than 50,000 patients have received treatment through the organization.

Hair restoration procedures include FUE, DHI, Sapphire FUE, and Manual FUE, alongside regenerative treatments such as PRP and Regenera Activa.

Who Is Dr. Eser Yalman?

Dr. Eser Yalman graduated from Atatürk University Faculty of Medicine in 1983. She began her career as a general practitioner.

Her qualifications include Occupational Medicine certification and completion of a Ministry of Health-approved Medical Aesthetics program in 2005. Within the medical team, her background supports patient assessment before aesthetic and hair restoration procedures.

Who Is Dr. Servet Çolak?

Dr. Servet Çolak graduated from Istanbul University Faculty of Medicine in 1994. His training includes mesotherapy and hair transplantation, with certifications in FUE and DHI.

His clinical work includes male and female hair transplantation, beard transplantation, eyebrow transplantation, and hairline revision. He has experience with regenerative treatments, including PRP, A-Cell, and G-Cell autologous micrograft therapy.

His experience in follicular extraction and implantation supports the clinic's physician-led approach to surgical hair restoration.

Which Hair Restoration Techniques Are Available?

The medical team provides several hair restoration techniques based on hair-loss pattern, donor-area characteristics, scalp condition, and aesthetic goals.

FUE (Follicular Unit Extraction) removes individual follicular units from the donor area before placement in areas affected by thinning or hair loss. It does not create the linear scar associated with strip harvesting.

Sapphire FUE uses sapphire blades to create recipient sites before graft implantation. Recipient incisions can follow the planned direction and graft placement.

DHI (Direct Hair Implantation) uses a Choi implanter pen to place extracted grafts into the

recipient area, allowing control over angle, direction, and positioning.

Manual FUE uses manual extraction instead of motorized equipment and may suit cases requiring controlled extraction.

The medical team also provides regenerative treatments, including PRP and Regenera Activa. PRP uses concentrated platelets derived from the patient's blood, while Regenera Activa uses autologous tissue components to address hair thinning.

How Does the Clinic Structure Patient Follow-Up?

Postoperative monitoring forms part of the clinic's treatment pathway. Patient reviews can continue for up to 12 months after transplantation to assess healing and hair growth.

For patients from the United Kingdom, the organization also maintains a London branch that provides local aftercare support. The expanded team increases physician capacity across consultation, treatment, and follow-up.

How Is the Medical Team Structured for International Patients?

International hair transplantation involves clinical care and postoperative coordination. Dr. Cinik provides treatment packages that may include testing, ECG, PRP, medication, accommodation, transfers, surgery, and coordination services.

The international structure coordinates medical appointments and treatment logistics within one pathway. The expanded physician team adds medical capacity while maintaining physician oversight of clinical decisions and treatment stages.

This structure gives patients access to physician input at key points of care and supports coordination between consultation, surgery, recovery, and longer-term assessment throughout the treatment pathway for international patients receiving treatment in Istanbul.

What Does the Medical Team Expansion Mean for Hair Restoration?

The appointments of Dr. Eser Yalman and Dr. Servet Çolak expand the physician-led structure at Dr. Cinik's Istanbul facility.

The development emphasizes physician involvement in assessment, planning, surgical oversight, and postoperative monitoring.

For Dr. Cinik, the expanded team provides additional physician capacity while maintaining a structured approach to hair transplantation and aesthetic medicine in Istanbul.
